Version 82 Dec 1-31, 2024 Updated: 18-Dec-24

Opdated.	10-DeC-24	Project	Assessments to be a set	0/10/10		Where Commitment Mede	0
Number	Commitment Description	Stage[1]	Accountable Lead	Status		Where Commitment Made	Comments
					Document [2]		
1	The proposed Project and its connections to the P.IM and IESO systems will be designed, constructed and operated in compliance with applicable NERC reliability standards or other applicable reliability standards, and will meet the requirements of NEB General Order MO-036-2012 titled "NEB General Order on Reliability Standards". [Tp of the extent that the Project facilities are deemed to be Critical Infrastructure the facilities will be designed, constructed and operated to meet all applicable Critical Infrastructure Protection requirements as defined by NERC or other applicable standards authority.	ALL	LEC Project Team	In Progress	APP	§4.3.7 §4.3.9	
2	LEC will comply with all regulations in effect during construction, operation, and decommissioning.	ALL	LEC Project Team	Future Action	APP	§6.3.1	
	LEC will comply win an required to its or down a construction, operation, and decommission mu. LEC will ensure contractors and their employees or subcontractors are qualified prior to beginning work and will inspect the contractor's work to ensure compliance with all regulatory	ALL	LEC Project Team	Future Action	APP	§6.3.1.1	
3	requirements, and any additional commitments required under the terms and conditions of the NEB Application.	==				3	
4	Condition Compliance	ALL	LEC Project Team	In Progress	EC	Condition 1	
-	LEC shall comply with all of the conditions contained in this Certificate unless the Board otherwise directs.					A	
5	Implementation of all Commitments LEC shall implement or cause to be implemented all of the policies, practices, mitigative measures, recommendations, and procedures for the protection of the environment and comotion of safety referred to in its Apolication, or as otherwise agreed to in its related submissions.	ALL	LEC Project Team	In Progress	EC	Condition 3	
6	LEC shall cause the approved Project to be constructed, operated, and abandoned in accordance with the specifications, standards and other information referred to in its	ALL	LEC Project Team	In Progress	EC	Condition 4	
-	Application or as otherwise agreed to in its related submissions. Notification of Detroteinn Montifications	A1.1	I FO Decision Terror	A second second	50	Over divisor 7	
7	Notification or Protection Modifications LEC shall seek approval from the Board of any proposed modification to the LEC electrical system before any modification is made.	ALL	LEC Project Team	As required	EC	Condition 7	
	Lec shall seek approvanion the board of any proposed infoducation of the Lec electrical assertion electre any incompation is made. The Project team will continue to engage in discussions with Aboriginal groups and their respective communities throughout the Project, with varying degrees of engagement	ALL	LEC Project Team	In Progress	APP, IR	§5.3.1	Updates on consultation and engagement activities
	depending on the interests of potentially impacted Aboriginal groups and their respective consultation protocol requirements.	,	LEO TIOJOOTTOUIII	ant togrood		§5.3.3	provided to the NEB on November 25, 2016 and July
						§5.3.6	6, 2018.
8	LEC has committed to continued engagement with the Six Nations of the Grand River and the Mississaugas of the New Credit First Nation, to identify potentially beneficial employment and economic opportunities, where available.					§5.3.7 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	Indigenous Engagement Updates provided to the CER on April 16, 2020, June 16, 2021, July 14, 2021, and April 19, 2022.
	Updates on engagement activities will be provided throughout the regulatory process by way of supplementary filings.					IR 3.1c Response to IR 3 Attachment 1 (Jan 29/16)	
9	LEC will continue to engage with Crown agencies to assess how it can appropriately assist the Crown in carrying out its obligations.	ALL	LEC Project Team	In Progress	APP	85.3.1	
40	To date, no significant concerns regarding EMF have been received from the public. Should any comments or concerns be received, LEC will develop appropriate responses.	ALL	LEC Project Team	As required	IR	IR 4.10 (HC-04)	
10						, , , , , , , , , , , , , , , , , , ,	
11	LEC will purchase a Canadian property policy that will cover only Canadian assets and business income at limits and deductibles appropriate to the Project. These limits and deductibles have not yet been determined. No assets other than those related to LEC will be covered by this policy. It is expected that liability coverages for LEC (including any Directors and Officers) will be added to existing corporate policies, and the cost for these policies will be allocated to the Project.	ALL	LEC Project Team	Future Action	IR	IR 4.13b	
12	Acquisition required in advance of construction will be completed in advance of the scheduled start of construction, including receipt of the Land Use Permit from the Ministry of Natural Resources and Forestry (MNRF). Following completion of the installation of the underwater HVDC cable, the MNRF process for the long-term easement of the transmission line would be completed based on a survey of the 'as built' location of the cable.	ALL	LEC Project Team	In Progress	IR	IR 3.6a, b, d, e	
13	Permanent tenure on the Lake Erie lakebed for the underwater HVDC cable alignment will be sought in accordance with the MNRF land disposition process.	ALL	LEC Project Team	In Progress	APP	§7.1.5	
14	As the PJM Facilities Study is not complete, PJM has not issued LEC the draft Interconnection Services Agreement (ISA). Under the PJM Tariff, the draft ISA will be issued after the Facilities Study is issued.	ALL	LEC Project Team	Future Action	IR	IR 4.15b	
15	Tabulas study is issued. The PJM Facilities Study has not been issued at this time but it is still expected to be issued in Q2 2016. Once it is issued, LEC will file it with the Board.	ALL	LEC Project Team	In Progress	IR	IR 4.15a	Filed with the NEB on August 19, 2019.
16	[I]n the event of an accident or malfunction, LEC will implement appropriate spills control measures as identified in the EPP.	ALL	LEC Project Team	As required	APP	§6.2.1.2, p 6-28	
	[A] Stage 4 excavation mitigation of developmental impacts will be carried out within the required area identified in the Stage 3 Archaeological Assessment. This work is scheduled to	D	LEC Project Team	Complete	IR	IR 3.10a	
17	commence in the spring of 2016 and is anticipated to be complete and submitted to the Ontario Ministry of Tourism, Culture and Sport and the National Energy Board by September 30, 2016. The Haldimand Converter Station will be designed in accordance with the applicable standards for electromagnetic compatibility limits and will not exceed the design criterion for	D	LEC Project Team	In Progress	APP	§4.2.5.5	
18	The frame levels.	D	EEO FIOJECT Fearin	in rogicas	011	34.2.0.0	
19	The Haldimand Converter Station will be designed with closed-cycle cooling systems for the on-site equipment for the maximum average daily 24 hour temperature per month.	D	LEC Project Team	In Progress	APP	§6.2.1.1, p 6-26 App D, Table D-1	
20	Shielding (shield wires), grounding, insulation and surge arresters will be installed to protect the Project infrastructure from damage related to lightning strikes.	D	LEC Project Team	Future Action	APP	§6.2.1.1, p 6-26 App D, Table D-1	
	The Project will be designed to address potential for effects from atmospheric deposition.	D	LEC Project Team	In Progress	APP	§6.2.1.1, p 6-26	
21		_				App D, Table D-1	
22	The final location of the Terminal Station and the point of connection with the Nanticoke TS swLEChyard will be confirmed through discussions with OPG and Hydro One. If the	D	LEC Project Team	In Progress	SUP	Supplementary Evidence Attachment 4 (Feb 26/16)	
23	location differs from the proposed location north of the Nanticoke TS swLEChyard, LEC will undertake additional studies as required. Converter Station lighting design will avoid illuminating the woodland, so roosting bats will not be exposed to artificial light.	0	LEC Project Team	In Progress	10	Response to IR 3A Attachment 2 (Mar 11/16)	
	Converter station lighting design will avoid illuminating the woodiand, so roosting pars will not be exposed to artificial light. Building foundations on the Haldimand Converter Station site to be designed in accordance with the Preliminary Geotechnical Report for the Haldimand Converter Station.	D	LEC Project Team	In Progress	SUP	Supplementary Evidence Attachment 2 (June 24/16)	
24		5	LEO TIOJOOTTOUIII	ant regrees	00.	ouppionionally Endoned Autominion 2 (ourio 2 in roy	
25	Soil electrical resistivity testing is currently being completed. Based on information gathered from this testing an overall site grounding study will be prepared. That study is anticipated to be completed by early spring 2017.	D	LEC Project Team	In Progress	IR	IR 1.2f (Aug 4/15)	
	LEC will use an emergency diesel generator that meets MOECC requirements.	D	LEC Project Team	Future Action	APP, IR	§6.2.1.8, p 6-47	
26						§6.2.1.15, p 6-72	
		1		1		App D, Table D-1 Response to IR 18:2 Attachment 2 (Sent 18/15)	
27	Drinking water for the Haldimand Converter Station will be hauled to the site and stored in a cistern.	D	LEC Project Team	Future Action	IR	Response to IR 1&2 Attachment 3 (Sept 18/15) IR 3.28	-
28	Dimining water for the maturnant Converter station will be natured to the site and store in a cisterin. The fibre optic cable will be approximately 35 mm in diameter with a weight of approximately 3.0 kg/m.	D	LEC Project Team	Future Action	IR	IR 5.3	
	To reduce or eliminate EMF exposure, the Project will use an HVDC transmission system; shielding to minimize electric field emissions; and burying the cables in the lake sediment to	D	LEC Project Team	Future Action	APP, IR	§6.2.2.6, p 6-104	T
29	minimize exposure.					\$6.2.27, p. 6-107 \$6.2.2.10, p. 6-112 \$6.2.2.14, p. 6-122 \$6.2.2.14, p. 6-125 \$6.2.2.16, p. 6-125 App D, Table D-1 App D, Table D-1 Response to IR 18.2 Attachment 3 (Sept 18/15)	
30	The [cable] burial depth will be determined during detailed design.	D	LEC Project Team	In Progress	IR	IR 5.2a	
31	The jet plow design will be finalized during detailed design of the Project.	D	LEC Project Team	In Progress	IR	IR 5.4a	
32	Jet plow procedures for installing the cable and for cable approach/landing with the jet plow will be confirmed during detailed design.	D	LEC Project Team	In Progress	IR	IR 5.4b	
33	The fuel storage tanks will be compliant with all applicable regulations.	D; C	LEC Project Team	Future Action	APP	§4.2.2.2	
34	The foundations for the Haldimand Converter Station and Terminal Station will be constructed in accordance with local and provincial building code requirements, which are in compliance with the National Building Code of Canada.	D; C	LEC Project Team	Future Action	IK	IR 7.5b	
35	The HVDC cable system will be protected by high-speed protection systems located at the two converter stations. The 500 kV AC cable system and interconnection facilities will be protected by high-speed protection systems located at the Haldimand Converter Station and the Nanticoke TS swLEChyard and will be designed in accordance with the requirements of Hvdro One.	D	LEC Project Team	In Progress	APP	§4.2.5.5

Number	Commitment Description	Project Stage[1]	Accountable Lead	Status		Where Commitment Made	Comments
36	LEC will develop and apply for approval of a private sewage system designed to meet municipal requirements and applicable codes.	D	LEC Project Team	In Progress	Document [2] APP, IR	\$ or pa. reference \$6.2.1.4, p 6-34 \$6.2.1.4, p 6-37 \$6.2.1.15, p 6-71 \$6.2.1.15, p 6-71 IR 4.10 (HC-03)	
37	The final detailed design for the Project is expected to be completed by early 2019 under the current Project schedule, and would be provided to the [National Energy] Board at that	D	LEC Project Team	In Progress	IR	IR 1.2i (Aug 4/15)	
38	The schematics of the converter's protection system, primary and back-up protective devices, circuit breakers, and metering devices will be addressed during detailed design. The final detailed design for the Project is expected to be completed by early 2019 under the current Project schedule, and will be provided to the [National Energy] Board at that time.	D	LEC Project Team	In Progress	IR	IR 1.2d (Aug 4/15)	
39	The type of protections and protected items on the DC side and protections unique for HVDC systems (converter) will be addressed as part of the detailed design which is expected to be completed by early 2019 under the current Project schedule, and will be provided to the [National Energy] Board at that time.	D	LEC Project Team	In Progress	IR	IR 1.2e (Aug 4/15)	
40	Ethylene glycol will be used as an antifreeze agent in the outdoor cooling circuit for the Haldimand Converter Station. The outdoor cooling circuit will be installed over an impermeable concrete slab with berms sufficiently high to contain possible ethylene glycol spills.		LEC Project Team	Future Action	IR	IR 4.10 (HC-02)	
41	The Long Point National Wildlife Area (NWA) is located approximately 7 km west of the closest part of the project, the HVDC underwater cable route. In the event that the location of the cable route or any project activities should change to occur within 5 km of the NWA, Environment and Climate Change Canada (ECCC) will be contacted as recommended.	D	LEC Project Team	As required	IR	IR 4.11 (ECCC 3)	
42 43	LEC has consulted with the MNRF regarding the Crown land disposition process. LEC will continue this engagement in support of the land disposition process which will proceed concurrently with the NEB Application process.	D	LEC Project Team	In Progress	APP	§4.1.1.2	
	Lab results for borehole samples along the cable route will be provided to Environment and Climate Change Canada upon issuance of the results to the NEB. The requested draft Environmental Protection Plan will be prepared and submitted to the NEB by June 24, 2016.	D	LEC Project Team	Complete Complete	IR	Response to IR 3 Attachment 2 (Jan 29/16)	
45	LEC will complete a quantitative assessment of the GHG emissions expected to result from the construction of the Lake Erie Connector including items as outlined in IR 7.15a, b and	D	LEC Project Team	In Progress	IR	IR 7.15	
45	c. The Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan will be completed and included in the Environmental Protection Plan and provided to the NEB (by	D	LEC Project Team	Complete	IR	IR 3.25a	
47	June 24, 2016]. The Inadvertent Returns Plan will be included in the Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan and provided to the NEB [by June 24, 2016].	D	LEC Project Team	Complete	IR	IR 3.25b	
48	Details on monitoring that will be conducted during HDD activities, as well as stop work thresholds (if required) will be included in the Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan and provided to the NEB (by June 24, 2016).	D	LEC Project Team	Complete	IR	IR 3.25c	
49	The final HDD drill path will be determined during detailed design and will be provided to the NEB when confirmed.	D	LEC Project Team	In Progress	IR	IR 7.1b.1	
50	The final HDD drill path, HDD entry and exit points, and drill angles will be confirmed during detailed design (anticipated in Q3 2017) and provided to the NEB when complete.	D	LEC Project Team	In Progress	IR	IR 7.1b.2	
51	The No-Drill Zone (minimum drill path cover by location) will be identified as part of detailed design and will be provided to the NEB when complete.	D	LEC Project Team	In Progress	IR	IR 7.1b.3	
52	The geotechnical analysis (Preliminary Geotechnical Report Lake Frie HVDC Project – Canadian Shore-Ine Horizontal Directional Drilling, Haldimand County, Ontario) submitted to the NEB as Attachment 4 on June 24, 2016 provides detailed soil stratigraphy in the area along the anticipated HDD trajectory and drill path. Additional detail on soil stratigraphy along the drill path will be provided to the NEB when the final drill path is determined during detailed design.	D	LEC Project Team	In Progress	IR	IR 7.1b.4	
53	A Navigation Safety Plan will be included as part of the Environmental Protection Plan (EPP) [and will be submitted to the NEB by June 24, 2016].	D	LEC Project Team	Complete	IR	IR 3.8b	
54	A detailed scheduled outage plan with description of methods, actions, operations, processes and a detailed activities program will be prepared during the detailed design phase of the project. Phaned outages will be programmed to be as short as possible, depending on maintenance requirements and will be scheduled as far in advance as possible, taking all stakeholder needs into consideration. Pre-outage planning will be detailed and thorough, ensuring resources are adequately matched to workload.	D	LEC Project Team	In Progress	IR	Response to IR 1 Attachment 1 (Dec 18/15)	
55	Installation and test plans are part of the quality control monitoring system developed for the Project, and will be developed during detailed engineering.	D	LEC Project Team	In Progress	APP	§4.2.5.2	
56 57	Preliminary geotechnical results for the Canadian shoreline are under analysis and a report with this information will be submitted to the NEB when completed. The Preliminary Geotechnical Report on the Canadian cable route in Haldimand County will be provided to the NEB on July 6, 2016.	D	LEC Project Team	Complete Complete	IR	IR 5.6a Supplementary Evidence (Jun 24, 2016)	
58	Additional detailed geotechnical report on the durabation of the statistic	D	LEC Project Team	Complete	IR	IR 4.5 a, b.1, b.2, b.3 IR 4.7 a, b, c IR 4.8	
59	Additional investigations are being completed including a geotechnical assessment of the lakebed sediments and cable risk assessment. The geotechnical assessment of the lakebed sediments and cable risk assessment will be submitted to the NEB by June 24, 2016.	D	LEC Project Team	Complete	IR	IR 4.14a	
60	The outcome of sediment sampling and testing in Lake Erie is documented in the Lake Erie Water Quality Modeling Addendum Report. Additional information including lab test results for the sediment along the cable route are forthcoming and will be provided in March 2016.	D	LEC Project Team	Complete	IR	IR 3.19a IR 3.19c	
61	If the results of the additional geotechnical assessment of the lakebed sediments and cable risk assessment require a change to the proposed HVDC cable route, an updated route will be provided to the NEB.	D	LEC Project Team	As required	IR	IR 4.14d	
62	An evaluation of the potential impact of crushed limestone on the cable will be carried out during detailed design to determine the maximum size of the limestone that can be used in order to mitigate potential damage to the HVDC cable.	D	LEC Project Team	In Progress	IR	IR 7.4	
63	LEC will provide a list of topics that will be covered by its training program to the Board during the hearing process.	D	LEC Project Team	Complete		IR 1.20 (Aug 4/15)	Underson encounterface of the second
64	LEC will address complaints by landowners and the public as required and in a manner consistent with the requirements of the NEB Act and the Electricity Filing Manual. LEC has and will continue to respond to comments and information requests in a timely manner. As part of the Application, supplementary reports will continue to be provided along with updated summaries of engagement activities for future reference.		LEC Project Team	As required	APP, IR	§7.6 Response to IR 3 Attachment 2 (Jan 29/16)	Updates on consultation and engagement activities provided to the NEB on November 25, 2016 and July 6, 2018.
65	Presently, there are no comments or concerns from Elmcrest to address. Should any comments or concerns be received, LEC will develop appropriate responses. LEC will also meet with Elmcrest to discuss the Project, at their request.	D; PC; C		As required	IR	IR 4.1c	
	Heritage and Archaeological Resources LEC must file with the Boad, at least 30 days prior to the commencement of construction: a) for both the terrestrial and in-water portions of the Project, confirmation, signed by an officer of the company, that it has obtained all of the required archeological and heritage resource permits and clearances from the relevant provincial authorities; b) a description of how LEC will meet any conditions and respond to any comments and recommendations contained in the permits and clearances referred to in a); and c) a description of how LEC has incorporated any additional mitigation measures into its EPP as a result of any conditions, comments, or recommendations referred to in b).	PC	LEC Project Team	Future Action	EC	Condition 24	
67	The Blasting Plan will describe the construction methods for installation of the cable using blasting and measures to prevent and mitigate effects on fish and fish habitat.	PC; C	LEC Project Team	Future Action	APP	§6.3	
68	Adherence to In-Water Restricted Activity Timing Windows LEC shall file with the Board for approval, at least sixty (60) days prior to the commencement of construction of the in-water trench: a) the relevant in-water restricted activity timing windows for the proposed Project; b) the finalized timing of the in-water trench construction; c) in the event that in-water trench construction will not adhere to the in-water restricted activity timing windows, the rationale for why, and mitigation measures to be applied; and d) a summary of LEC's consultation with regulatory agencies (e.g., Ontario Ministry of Natural Resources and Forestry) in relation to the matters set out in a) to c). This summary must include any issues or concerns raised and how LEC has addressed or responded to those issues or concerns.		LEC Project Team	Complete	EC	Condition 19	Response to Condition 19 filed with the NEB on August 10, 2018.
69	Biasted In-Water Excavation and Backfill Material LEC shall file with the Board, at least one hundred twenty (120) days prior to the commencement of construction, the location of the identified source for the proposed crushed limestone borrow material to be used for the backfilling of the blasted in-water trench.	PC	LEC Project Team	Future Action	EC	Condition 13

Updated:	18-Dec-24	Durations					
Number	Commitment Description	Stage[1]	Accountable Lead	Status	Document [2]	Where Commitment Made	Comments
70	Commitments Tracking Table LEC shall file with the Board and post on its website, at least thirty (30) days prior to the commencement of construction, a commitments tracking table listing all commitments made by LEC in ts Application, and otherwise agreed to during questioning or in its related submissions, including references to: i) the documentation in which the commitment appears (for example, the Application, responses to information requests, hearing transcripts, permit requirements, condition filings, or other documentation); ii) the accountable lead for implementing each commitment; and iii) the estimated timelines associated with the fulfilment of each commitment.	PC	LEC Project Team	Future Action	EC	Condition 8a	
71	Commitments Tracking Table LEC shall file with the Board, at the following times, an updated commitments tracking table: 1) within hingthy (9) days after the certificate date	PC	LEC Project Team	Complete	EC	Condition 8bi	Ver. 1 submitted to NEB September 25, 2017.
72	Commitments Tracking Table LEC shall file with the Board, at the following times, an updated commitments tracking table: ii) at least thirty (30) days prior to commencement of construction	PC	LEC Project Team	Future Action	EC	Condition 8bii	
73	Transmission Contracts LEC shall file with the Board, at least sixty (60) days prior to the commencement of construction, confirmation that LEC has executed the necessary long-term transmission contracts for the Project.	PC	LEC Project Team	Future Action	EC	Condition 29	
74	LEC will include compliance monitoring as part of the EPP associated with the Project including inspection, monitoring, and follow-up. Existing Best Management Practices, regulations, and agency direction will be included in the EPP as appropriate.	PC	LEC Project Team	Future Action	APP	§6.3.1	
75	Compliance Program LEC shall few with the Board for approval, at least ninety (90) days prior to the commencement of construction, a Quality Assurance and Compliance Program. The Program shall describe the methods by which LEC shall ensure the Project described in the Application is designed, constructed and operated in conformity with the conditions of the centificate, designs, specifications, and undertakings set forth in its Application or as otherwise adduced in its evidence before the Board. The Program shall becard, a) a process or procedure to identify conditions of approval, company designs, specifications and undertakings set forth in the Application or as otherwise adduced in LEC's evidence; b) processes or procedures to monitor, measure, document and report on compliance with conditions of approval, company designs, specifications and undertakings c) the position title and contact information of the person(s) responsible for each aspect of the Program; c) the position title and contact information of the person(s) responsible for each aspect of the Program; c) approval, company designs, specifications and undertakings set forth in the Application or otherwise adduced in LEC's evidence; e) a process or procedure to identify and mighement any corrective actions as a result of any non-conformances that may be necessary before recommencing work; f) a process or procedure to evaluate the effectiveness of the corrective actions as a result of any non-conformances; and g) methods by which adherence to the Program shall be monitored, measured, documented and reported to LEC's management.	PC	LEC Project Team	Future Action	EC	Condition 9	
76	Reliability, Safety, and Security of International Power Lines LEC shalt: a) comply with the provisions of Board Order MO-036-2012 electric reliability; and b) file with the Board a list of reliability standards applicable to the Project, at least sixty (60) days prior to commencement of construction.	PC	LEC Project Team	Future Action	EC	Condition 17	
77	Design and Interconnection Compliance LEC shall file with the Board for approval, at least sixty (60) days prior to the commencement of construction, a report confirming that the design of facilities, construction plan, and planned operations comply with the following: a) LEC's 500 KV equipment has been designed for a continuous voltage rating of at least 550 kV; b) LEC's protective relaying system will be set to ensure that transmission equipment remains in-service for the voltage range between 94% of the minimum continuous value and 105% of the maximum continuous value; c) LEC's contection equipment has been designed to be fully operational within -40 degrees C to +40 degrees C ambient air temperature; and d) LEC has made provision in the design of protections and controls of the Project to allow for future installation of Special Protection Scheme equipment that complies with the Northeast Power Coordinating Council reliability requirements.	PC	LEC Project Team	Future Action	EC	Condition 21	
78	Environmental Compliance Manager Qualifications LEC shall file with the Board, at least twenty one (21) days prior to commencement of construction, confirmation that a qualified environmental compliance manager shall be on site during construction to carry out appropriate inspections and monitor compliance with the final EPP. LEC shall include the qualifications, environmental education and experience, roles and responsibilities, decision-making authority, and reporting structure of each environmental compliance manager assigned to the Project that will be on site to monitor the effectiveness of erosion and sedimentation control measures, multi-functional barriers for wildlife exclusion, and any other applicable environmental miligation measures that would be put in place during construction, as well as implementing any contingency plans as necessary, and performing any other duties outlined in the final EPP.	PC	LEC Project Team	Future Action	EC	Condition 25	
79	Qualified Aquatic Specialist LEC shall file with the Board, at least fourteen (14) days prior to the commencement of construction, confirmation that a qualified aquatic specialist shall be on site during construction. LEC shall include the qualifications and experience, roles and responsibilities, decision-making authority and reporting structure of each aquatic specialist assigned to the Project that will be on site during basing activities and HDD.	PC	LEC Project Team	Future Action	EC	Condition 26	
80	Other Approvals and Permits LEC shall file with the Board, at least fourteen (14) days prior to commencement of construction, confirmation by an officer of LEC that all necessary approvals and permits have been obtained for the Project from the organizations listed in Section 4.4.2 of the Application – "Other Approvals and Permits". LEC shall also include in the filing any commitments made or requirements attached to any permits or approvals so issued.	PC	LEC Project Team	Future Action	EC	Condition 27	
81	Haldimand Converter Station Foundation Design LEC shall file with the Board for approval, at least ninety (90) days prior to the commencement of construction, a final geotechnical detailed design report that sets out the design parameters and methodologies recommended to design the foundations of the structures at the Haldimand Converter Station in accordance with the National Building Code of Canada.	PC	LEC Project Team	Future Action	EC	Condition 12	
82	In-Water Third Party Facilities Crossing Plan LEC shall file with the Board for approval, at least ninety (90) days prior to the commencement of construction, a plan setting out details as to how the Project will cross third party in- water facilities, including: a) minimum Durial depth; b) proximity of the cable to all existing third party facilities; c) construction procedure; and d) confirmation that the information filed is in accordance with the agreements or crossing permits.	PC	LEC Project Team	Future Action	EC	Condition 18	
83	Following the delineation of the detailed terrestrial and underwater cable routes after the in-water survey and prior to construction, a series of more detailed cable route alignment sheets will be prepared at a suitable scale to identify environmental constraints and other potential issues. The EPP, alignment sheets, and draft plans will be available prior to construction.	PC	LEC Project Team	In Progress	APP	§6.3	
84	An EPP will be developed that will include mitigation measures for fugitive dust during construction. These measures will be consistent with those typically deployed for construction activities in Ontario for projects of a similar scale and location. Dust control during construction will be addressed through various operational methods such as watering, staging of work, erosion and sedimentation control measures (i.e., alt fenoin), and re-vectation of distructed areas.	PC; C	LEC Project Team	Future Action	IR	IR 4.11 (ECCC 5)	
85	The EPP noted above [IR 4.11 ECCC 5] will indicate the conditions under which mitigation measures for fugitive dust will be deployed.	PC; C	LEC Project Team		IR	IR 4.11 (ECCC 6)	
86	LEC will consult with Haldimand County in regards to any required zoning variances (height, set-backs) for the Haldimand Converter Station.	PC	LEC Project Team	Complete	APP	§6.2.1.11, p 6-57 App D, Table D-1	

Version 82 Dec 1-31, 2024 Updated: 18-Dec-24

Number	18-Dec-24						
	Commitment Description	Project Stage[1]	Accountable Lead	Status	Document [2]	Where Commitment Made	Comments
87	EC also intends to carry out pre-construction information sessions to inform the community in the vicinity of the Project in advance of construction and respond to questions or optential concerns.	PC	LEC Project Team	Future Action	IR	IR 4.1c	
88	Pre-construction communication with local boating associations will limit interactions with local boating activities.	PC	LEC Project Team	Future Action	APP, IR	§6.2.2.11, p 6-115 App D, Table D-2 Response to IR 1&2 Attachment 3 (Sept 18/15)	
89	The Cultural Heritage Resource Discovery Contingency Plan will address the unlikely discovery of archaeological or cultural heritage resources.	PC; C	LEC Project Team	Future Action	APP	§6.3	
1	LEC will prepare a Project-specific EPP prior to construction for the Lake Erie Connector addressing NEB Application requirements which will:	PC	LEC Project Team	Future Action	APP	§6.3	
	Reflect all commitments and requirements in relation to the design, planning, construction, and operation of the Lake Erie Connector Include mitigation measures to be implemented during construction, operation, and decommissioning to reduce the environmental impact of the Project on the environment as Judimed in the ESEA (Section 6.2)						
-	Identify appropriate communication and training protocols and ensure they are in place and that staff have been appropriately trained in their implementation						
91	Identify key contacts and responsibilities for carrying out practices and procedures	5.0		E	10		
	EC confirms that the final EPP will include all items as listed in IR 7.6a.1 through 7.6a.8.	PC	LEC Project Team	Future Action	IR	IR 7.6a	
	LEC confirms that the Final EPP will include assignment of accountabilities and responsibilities for the Environmental Compliance Manager.	PC	LEC Project Team	Future Action	IR	IR 7.8b	
93	The EPP will be updated and revised as necessary through detailed design and will be filed with the NEB when completed.	PC	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16) Condition 20	
94 i 1	Environmental Protection Plan (EPP) EC shall file with the Board for approval, at least sixty (60) days prior to the commencement of construction, a final and updated project specific EPP, which it has committed to mplement. The EPP shall describe all environmental protection procedures, and mitigation and monitoring commitments, as set out in LEC's Application or as otherwise agreed to in ts related submissions. The EPP shall use clear and unambiguous language that confirms LEC's intention to implement all of its commitments. Construction will not commence until .EC has received approval of its EPP from the Board.	PC	LEC Project Team		20		
95 ^F	Prior to construction, an erosion and sedimentation control plan will be developed. The Erosion and Sedimentation Control Plan will identify control measures and best management oractices to address management of soils and water discharges from work and stockpile areas.	PC	LEC Project Team	Future Action	APP	§4.2.3.2 §6.3	
50	The Erosion and Sedimentation Control Plan was developed to a sufficient level of detail in accordance with local and provincial standards. LEC confirms that items as listed in 7.12 a.5) and 7.12 b. will be updated as required during detailed design and will be included in the Final EPP.	PC	LEC Project Team	Future Action	IR	IR 7.12	
97 t	The LEC Connector Emergency Response Plan (ERP) for construction will be completed during detailed design and the construction planning stages. The ERP for construction will be provided to the NEB when complete and no later than three (3) months prior to start of construction.	PC	LEC Project Team	Future Action	IR	IR 6.1	
98 a b b	Quantitative Estimation of Direct, Project-related Greenhouse Gas (GHG) Emissions from Construction LEC must file with the Board, at least ninety (90) days prior to the commencement of construction: a) a quantitative estimation and assessment of greenhouse gas emissions expected to directly result from each activity, including clearing, during construction of the Project, including, but not limited to, emissions generated by vessels, vehicles, and equipment, and b) a description of the calculation methodology used in the estimation and assessment, the assumptions and inputs used, and any variables that may affect the results.	PC	LEC Project Team	Future Action	EC	Condition 28	
99 5	Construction Safety Manuals EC shall file with the Board, at least ninety (90) days prior to the commencement of construction: a) safety manuals related to the construction of the Project. The manuals must address construction procedures, activities, and public safety issues for the following: b) terristrial and in-water cable installation, including details on the post-lay burial procedure; b) Hatimand Converter Station construction; b) Hatimand Converter Station construction; b) Alatisting activities; and b) navigation limitations to lake traffic during construction; b) an outline of the safety training program to be implemented for the operation of the Project.	PC	LEC Project Team	Future Action	EC	Condition 14	
100 L	EC will require MNRF (Oil and Gas) approval for HDD installation including disclosure of potential additives that may be used.	PC; C	LEC Project Team	Future Action	IR	IR 7.3b	
101 r	An Inadvenent Return Plan [for HDD] will be developed which will specify how to monitor for, identify, contain, and remediate releases of drilling fluid. Descriptions of drilling fluid (e.g., naterial safety data sheets) will also be included in the plan.	PC; C	LEC Project Team	Future Action	APP	§4.2.3.7 Throughout §6.2.1 and §6.2.2 §6.3 §6.3.1.2 Aon D. Table D-2	
102 t	The Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan including the Inadvertent Return Plan will be completed once the detailed drill design is complete ater in the design process for the Project. The Inadvertent Return Plan will specify how to monitor for, identify, contain, and remediate releases of drilling fluid. Details on monitoring hat will be conducted during HDD activities, as well as stop work thresholds (if required) will be included in the Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan.	PC	LEC Project Team	Future Action	IR	IR 4.11 (ECCC 4)	
103 ^I	EC will provide a detailed description of the contingency plan should HDD installation fail including consideration of alternate installation methods in the final HDD Contingency Plan	PC	LEC Project Team	Future Action	IR	IR 7.2	
t t	hat will be provided to the NEB three months prior to construction. Horizontal Directional Drilling (HDD) and Contingency Plan EC shall file with the Board for approval, at least ninety (90) days prior to the commencement of construction:	PC	LEC Project Team	Future Action	EC	Condition 11	
104 t	a) a drawing showing the HDD drill path, entry and exit points, the anticipated drill angles at the entry and exit points, the no drill zone, and the soil stratigraphy along the HDD rajectory based on the available borehole information; b) a contingency plan to provide an alternative method of installation along the Canadian shore-line in the event that the HDD procedure is not successful; and						
	c) confirmation by an authorized officer of LEC based on the available information, that the HDD installation can be completed in a manner consistent with safety and reliability.						
105 L	Agreements and Crossing Permits LEC shall file with the Board, at least ninety (90) days prior to the commencement of construction, the identity of all infrastructure facilities to be crossed by the power line, and confirmation that all the agreements or crossing permits for those facilities have been acquired.	PC	LEC Project Team	Future Action	EC	Condition 15	
105 L	Agreements and Crossing Permits		LEC Project Team	Future Action	EC APP	Condition 15 §6.2.1.3, p 6-32 §6.3	
105 L 106 L 107 6 107 6	Agreements and Crossing Permits .EC shall file with the Board, at least ninety (90) days prior to the commencement of construction, the identity of all infrastructure facilities to be crossed by the power line, and confirmation that all the agreements or crossing permits for those facilities have been acquired. The Landscepting Plan will be prepared to address the larger buffer immediately to the east of the Haldimand Converter Station and the wide-bottom swale, and land around the other				-		
105 L 106 F 107 f 107 f 107 f	Agreements and Crossing Permits LEC shall file with the Board, at least ninety (90) days prior to the commencement of construction, the identity of all infrastructure facilities to be crossed by the power line, and confirmation that all the agreements or crossing permits for those facilities have been acquired. The Landscaping Plan will be prepared to address the larger buffer immediately to the east of the Haldimand Converter Station and the wide-bottom swale, and land around the other permeters of the facility which will likely be seeded with native grass mix and/or other pernnial native species. Weed Management Plan LEC shall like with the Board for approval, at least forty-five (45) days prior to the commencement of construction, a project specific Weed Management Plan that includes: a) LEC's goals, including mitgation goals, and measurable objectives regarding the Weed Management Plan; b) the methods and procedures available to achieve the mitigation goals and clear decision criteria for their selection; b) a mechanism for tracking weed problems and weed control activities; d) adaptive management practices that will be used to revise the mitigation goals and newed control activities; adaptive management practices that will be used to revise the mitigation and procedures if evaluation criteria determine that mitigation goals are not met; addressed or responded to those issues or concerns; b) the type and frequency of monitoring activities and parameters to be monitored and the applicable criteria that it would be used to measure against; b) another that the approved Weed Management Plan; b) proposed schedule for reporting to the Board on the progress and success of the Plan; and j confirmation that the approved Weed Management Plan; confirmation that the approved Weed Management Plan; LEC confirms that there so that will be used to management Plan; EC confirms that there as listed in 7.11 a) through 7.11 e) will be addressed as part of development of the Final EPP. Please note that weedin	PC; C PC; C	LEC Project Team	Future Action	-	§6.2.1.3, p 6-32 §6.3

111	A pollution prevention plan will also be developed for materials handling and will be implemented during construction.	PC: C	LEC Project Team	Future Action	APP	§ 6r bd. reference §4.2.3.2	
112	In Water Cable Burial Contingency Plan LEC shall file with the Board for approval, at least ninety (90) days prior to the commencement of construction, a contingency plan detailing the measures to be taken and a justification as to why a different burial depth is sufficient in the event that the minimum burial depth as identified by LEC, to be 2.5 metres between kilometre post 0 and kilometre post 18, and to be 1.5 metres between kilometre post 18 and the Canadian border, cannot be achieved in the lakebed. The contingency plan shall include an impact analysis, including any potential environmental effects, of any mitigation measures considered in response to burial depths shallower than the minimum burial depth.	PC; C	LEC Project Team	Future Action	EC	Condition 10	
113	LEC will update the Repair Contingency Plan in the Final EPP to include a reference to the Navigation and Navigation and Safety Plan and identify potential additional navigation and navigation safety measures that would be implemented during cable repair activities.		LEC Project Team	Future Action	IR	IR 7.14b	
114 115	The Environmental Protection Plan will include an Emergency Spill and Response Contingency Plan that will contain protocols for managing spills. The Emergency Spill and Response Plan will address terrestrial and aquatic construction requirements, providing a description of the best management practices that will be followed during construction to reduce the risk of spills and, in the unikely event of a spill, identify response measures.	PC; C PC; C	LEC Project Team LEC Project Team	Future Action Future Action	IR APP	IR 4.10 (HC-02) §6.3	
116	The Surface Water Management Plan will be prepared to mitigate potential off-site water guality and guantity impacts associated with the Project.	PC; C	LEC Project Team	Future Action	APP	§6.3	
117	The Traffic Management Plan will be developed to minimize potential effects associated with construction related traffic and associated potential effects (i.e., temporary lane closures)	PC; C	LEC Project Team	Future Action	APP, IR	§6.2.1.16, p 6-75 §6.3 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
118	The Waste Management Plan will address the control of waste from the Project in accordance with NEB and other potential regulatory requirements.	PC; C	LEC Project Team	Future Action	APP	§6.3	
119	LEC confirms that the Final Waste Management Plan will be updated to include measures to manage waste from construction and operations of the aquatic portion of the Project. Waste generated during installation of the cable in Lake Erie will be collected and isolated on the vessels and appropriately disposed of on-shore when docked.	PC	LEC Project Team	Future Action	IR	IR 7.13a	
120	LEC confirms that the Waste Management Plan will be updated for the Final EPP, including both the terrestrial and aquatic portions of the Project. Please note that there are no legislated reporting requirements for implementation of the Waste Management Plan. Waste Management Plan	PC	LEC Project Team	Future Action	IR FC	IR 7.13b.1 through b.5	
121	LEC shall file with the Board for approval, at least forty-five (45) days prior to the commencement of construction, an updated Waste Management Plan which identifies measures to manage waste from construction and operations for the in-water portion of the route. The Plan shall include: a) LEC's opair, including mitigation goals, and measurable objectives regarding the Waste Management Plan for the in-water portion of the route; b) the methods and procedures available to achieve the mitigation goals and clear decision criteria for their selection; c) criteria to evaluate if the mitigation goals have been met; d) adaptive management practices that will be used to revise the mitigation methods and procedures if evaluation criteria determine that mitigation goals are not met; e) details on handling, storage, use, and disposal of waste; f) a summary of LEC's consultation concerning the matters set out in a) to e) with appropriate regulatory authorities, including any issues or concerns raised and how LEC has addressed or responded to those issues and concerns; g) the type and frequency of monitoring activities and parameters to be monitored and the applicable criteria that it would be used to measure against; h) a proposed schedule for reporting to the Board on the progress and success of the Plan; and j) confirmation that the approved Waste Management Plan with be attached to the final EPP.	PC .			EU		
122	An Environmental Protection Plan (EPP) will be developed that will include protocols for managing discoveries of wildlife, including migratory birds.	PC; C	LEC Project Team	Future Action	IR	IR 4.11 (ECCC 1) IR 4.11 (ECCC 2)	
123	An EPP will be developed that will include protocols for managing discoveries of wildlife, including non-migratory birds and other terrestrial SAR and any migratory bird SAR listed under schedule 1 of SARA. Contact information for the appropriate agency will be included in the EPP in the event of such encounters.	PC; C	LEC Project Team	Future Action	IR	IR 4.11 (ECCC 2)	
124	LEC confirms that measures as listed in IR 7.9a, b and c will be implemented. LEC will update and provide the Final EPP Blasting Plan to the NEB three months prior to construction.	PC; C	LEC Project Team	Future Action	IR	IR 7.9	
125	LEC confirms that, as noted in the draft EPP, a qualified Environmental Compliance Manager will be on-site during construction carrying out appropriate inspections and monitoring compliance with measures as listed in 7.8 a) and the measures as listed in the Final EPP.	PC; C	LEC Project Team	Future Action	IR	IR 7.8a	
126 127	LEC confirms that. unless work is started prior to the bird nesting season, the measures noted in IR 7.7a through 7.7e will be implemented. The ERPs for construction and operations will include relevant and up-to-date contact information so members of the public are able to notify LEC and/or other relevant entities, of an emergency.	PC; C PC; C	LEC Project Team LEC Project Team	Future Action Future Action	IR	IR 6.1g.3	
128	The ERPs for construction and operations will be posted to the project website and that LEC will post updated versions of the ERPs as required.	PC; C	LEC Project Team	Future Action	IR	IR 6.1g.4	
129	Before operation of the Project, an emergency repair and response plan will be prepared to identify procedures and contractors necessary to perform maintenance and emergency repairs. [The] emergency response plan (ERP) will be developed based on the National Standard of Canada, CAN/CSA-Z731-03 (R2009): Emergency Preparedness and Response. LEC will [provide the ERP] with Haldimand County and local Fire Services.	PC; C	LEC Project Team	Future Action	APP	§4.2.5.6 §4.2.5.7 §6.2.1.16, p 6-74 §6.3	
130	LEC will consult with the appropriate parties and agencies during the development of the ERPs for construction and operations in accordance with applicable standards, including Canadian Standards Association (CSA) Standard Z731-03 Emergency Preparedness and Response and North American Electric Reliability Corporation (NERC) Standard EOP-001- 2b – Emergency Operations Planning.	PC; C	LEC Project Team	Future Action	IR, SUP	IR 6.1a Supplementary Response to IR 6.1a (Jul 6/16)	
131	LEC will consult with appropriate persons, agencies, and governments that have the relevant expertise when establishing the ERPs, including, but not limited to, continuing consultation with: - Haldimand County; - Ministry of Natural Resources and Forestry (MNRF); - Ministry of Transportation; - Ministry of Transportation; - Ministry of Transportation; - Ministry of Transportation; - Hydro One; - Independent Electricity System Operator (IESO); - PJM; - Transport Canada; and - Canadian Coast Guard. - Canadian Coast Guard. LEC will issue correspondence to relevant agencies to confirm the relevant and interested parties to be engaged. The extent of consultation will be determined by the identified hazards and associated Project activities.	PC; C PC; C	LEC Project Team	Future Action	SUP	Supplementary Response to IR 6.1a (Jul 6/16) Supplementary Response to IR 6.1a (Jul 6/16)	
132	Following confirmation of appropriate agencies and the extent of consultation, appropriate engagement will be carried out (including through emails, telephone, and meetings) to solicit input on proposed approaches for emergency response planning associated with the construction and operation of the Lake Erie Connector. Agencies and interested parties will be provided an opportunity, as requested, to review and comment on the draft ERP documents. Comments will be considered and addressed accordingly. The final ERPs will be provided to those agencies that confirm that a copy is required to be filed with that agency during the consultation process.	ru, u	LEG Project Leam	Future Action	3UF	Supprementary response to IR 5.18 (JUI 5/15)	
133	LEC will include a detailed description of the notification procedure and associated parties to be notified in the ERPs that will provided to the NEB when complete. The parties to be notified may include some or all of the parties and agencies listed in the response to IR 6.1 a).	PC; C	LEC Project Team	Future Action	IR	IR 6.1e	
134	LEC will include in the ERPs for construction and operations a comprehensive list of entities (parties and agencies) with which the ERP will be provided and a description of the frequency of ERP updates, which will be confirmed with the individual parties and agencies through consultation. Parties and agencies to be provided with the ERP may include some or all of those listed in the response to IR 6.1 a) above. The confirmed list of entities will be included in the ERPs provided to the NEB.	PC; C	LEC Project Team	Future Action	IR	IR 6.1f	
135	The ERPs will be coordinated with Hydro One and the IESO and, as required, the corresponding agencies in the United States.			Future Action	IR	IR 6.1g.1	
136	LEC will engage with relevant entities (parties and agencies) in the Project area in continuing education activities regarding the identified hazards.	PC; C	LEC Project Team	Future Action	IR	IR 6.1g.2

188	Construction Progress Reports LEC shall file with the Board, at the end of each month during construction, construction progress reports. The reports shall include information on the activities carried out during the	с	LEC Project Team	Future Action	EC	Condition 30	
100	reporting period, as well as any environmental, safely and security issues and non-compliances that arcse and the measures undertaken for the resolution of each issue and non- compliance. The first report shall include a schedule for anticipated submission of each monthly report until construction is complete. LEC will implement a construction management plan, including protocols to minimize enqine diling and maintain vehicles.	6	LEC Project Team	Future Action	APP	§6.2.1.11, р 6-57	
189	LEC will imperient a construction management part, including protocols to minimize engine tailing and maintain ventues.	C				§6.2.1.14, p 6-68 §6.2.1.15, p 6-71 §6.2.1.16, p 6-76 App D, Table D-1	
190	Implement appropriate fugitive dust control measures such as watering, staging of work, and erosion and sedimentation control measures (i.e., silt fencing), and re-vegetation of disturbed areas. Fugitive dust control measures will be implemented as required.	с	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
191	Construction activities, including traffic management will be coordinated with the Haldimand County Roads Department and adjacent property owners as appropriate to minimize disruption during installation.	С	LEC Project Team	Future Action	APP	§4.2.3.2 §4.5.7 Supplementary Evidence Attachment 1 (June 24/16)	
193	LEC will coordinate with the appropriate utilities during installation of the AC and HVDC cables.	с	LEC Project Team	Future Action	APP, IR	§6.2.1.16, p 6-76 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
194	Should there be noise complaints by landowners and the public LEC will address such complaints as required and in a manner consistent with the requirements of the NEB Act and the Electricity Filing Manual.	С	LEC Project Team	As required	IR	IR 4.10 (HC-06)	
195 196	Follow Best Management Practices for erosion and sediment controls Install multi-functional barriers with integrated erosion controls as appropriate	C	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
196	Instal mode-functional panetes with integrated eroson controls as appropriate Retain existing vegetation and stabilize exposed solits where possible	C	LEC Project Team	Future Action		Supplementary Evidence Attachment 1 (June 24/16)	
198	Treating expanding and stability exposed source interpretation when possible	c	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
199	Minimize nonessential clearing and grading	С	LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
200	Minimize slope length and gradient of disturbed areas	С	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
201 202	Store/stockpile soil away from watercourses, drainage features and top of steep slopes	C	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
202	Follow the construction sequencing provided in the design Install and maintain the erosion and sedimentation control measures as per plan specifications	C	LEC Project Team LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
204	LEC will implement stormwater management and erosion and sediment control plans to provide quantity and quality control for surface runoff. LEC will implement stormwater management and erosion and sediment control plans to provide quantity and quality control for surface runoff. LEC will implement erosion and sedimentation control measures and best management practices during construction of the Haldimand Converter Station and installation of the AC and HVDC cables including an inadvertent tetrum plan for HDD installation.	č	LEC Project Team	Future Action	APP	§6.2.1.2, p 6-28 §6.2.1.15, p 6-72 App D, Table D-1	
205	Install and maintain erosion and sediment control devices during construction in accordance with the Erosion and Sedimentation Control Plan	С	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
206	Erosion and sediment control devices will be installed; construction-phase stormwater management best practices will be implemented[.] Erosion, sediment control and surface water control measures will be deployed in construction lay-down areas and cable routes.	с	LEC Project Team	Future Action	APP, IR	§4.2.2.2 §6.2.1.4, p 6-38 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
207	The ERP to be implemented during operations will be completed during the construction phase and will be provided to the NEB no later than three (3) months prior to the start of commissioning and operations.	с	LEC Project Team	Future Action	IR	IR 6.1	
208	Abandonment Funding LEC shall file with the Board for approval, at least ninety (90) days prior to the date the Project is placed in service, a mechanism to set aside funds for the future abandonment of the Project that is consistent with the principles for set-aside mechanisms set out in the Board's MH-001-2013 Reasons for Decision dated 29 May 2014, and specifically chapters 2.9, 3.4, 5.2.2, and 5.2.4, and appendices VII, XI, and XII. The set-aside mechanism shall reflect the abandonment cost estimate LEC filed in its evidence.	С	LEC Project Team	Future Action	EC	Condition 38	
209	The interconnection of the Project with these stations [the Erie West 345 kV substation in Pennsylvania and the Nanticoke TS switchyard in Ontario] will be undertaken together with Penelec and Hydro One respectively, subject to their customer impact and approvals processes.	с	LEC Project Team	Future Action	APP	§4.3.1	
210	Excavation Safety LEC shall perform all excavations along the cable route in accordance with applicable occupational health and safety legislation. LEC shall file with the Board, within sixty (60) days of the completion of construction, a report detailing any construction activities that did not comply with the applicable occupational health and safety legislation.	С	LEC Project Team	Future Action	EC	Condition 35	
211	Operations Safety Manuals LEC shaft file with the Board, at least ninety (90) days prior to the commencement of operations: a) safety manuals related to the operation activities of the Project. The manuals must address routine operation procedures, activities, and public safety issues that might be encountered during the operation of the: i) Herrestrial and in-water cables; and ii) Haldimand Converter Station; b) an outline of the safety training program to be implemented for the operation of the Project.	с	LEC Project Team	Future Action	EC	Condition 37	
212	by an obtained on the safety training program to be imperimented on the operation of the Project. Shielding will be employed to the extent practical to address noise during HDD installation. LEC will engage in discussions with local landowners in the area to address concerns regarding noise during construction in this area.	с	LEC Project Team	As required	APP, IR	§6.2.1.9, p 6-48 §6.2.1.11, p 6-57 §6.2.1.14, p 6-68 §6.2.1.4, p 0-68 §6.2.1.5, p 6-71 App D, Table D-1 Response to UR 18.2 Attachment 3 (Sept 18/15)	
213	LEC will be following the guidelines in ASTM F1962 Standard Guide for Use of Maxi-Horizontal Directional Drilling for Placement of Polyethylene Pipe or Conduit Under Obstacles, Including River Crossings. As required, LEC will follow the MNRF (Oil and Gas) drilling permits and approvals process and associated conditions.	С	LEC Project Team	Future Action	IR	IR 7.1a.1	
214	LEC will follow applicable regulations during HDD installation including relevant MNRF permitting and approval requirements. MSDS sheets will be available for all potential additives. There are no requirements to file the MSDS sheets with any agencies, however, they will be kept on-site and on file and provided to agencies upon request.	С	LEC Project Team	Future Action	IR	IR 7.3a	
216	Seasonal avoidance of the spring and fall fish spawning seasons will be considered as a possible additional protective measure for only the final approach of the HDD to the receiving pt, which may have an increased risk of inadvertent release as cover over the drill path decreases.	С	LEC Project Team	No Longer Applicable as per correspondence with MNRF	APP	§6.2.2.5, p 6-100	
217	[S]erious harm to fish will be prevented by monitoring for inadvertent release of drilling fluids followed by containment and clean-up if necessary.	С	LEC Project Team	Future Action	APP, IR	§6.2.2.5, p 6-100 Response to IR 1&2 Attachment 2 (Sept 18/15)	
219	Preparatory excavation of the HDD receiving pit and pre-cutting of the cable trench will physically avoid spawning areas, and will include mitigation measures to prevent serious harm to individual fish.	С	LEC Project Team	Future Action	APP	§6.2.2.5, p 6-99 §6.2.2.5, p 6-100	
L	The HDD path within the bedrock will avoid the shallow, sandy nearshore area of Hickory Beach that is the focus of spring spawning activities by fish species	I	I	1	1

					Document [2]		
220	Visual monitoring of the Lake Erie beach and shoreline area during HDD will identify the occurrence of drilling fluids at the ground surface in the unlikely event of an inadvertent release. Inadvertent releases will be isolated and controlled to limit the extent of potential effects, followed by removal and clean-up to restore affected areas.	С	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 2 (Feb 26/16) Supplementary Evidence Attachment 6 (Feb 26/16)	
221	Divers/video cameras will monitor the [HDD] sump and should drilling fluid be discharged, divers will employ a submersible pump to vacuum the drilling fluid into tanks that are located on the support barge.	С	LEC Project Team	Future Action	APP	§4.2.3.7	
222	Monitor the drilling fluid volume and pressure within the borehole	C		Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
223	Monitor the underwater sump using divers and/or video cameras The disturbed areas [from HDD] will be restored to their original grade to the extent practical and seeded to allow for natural re-vegetation.	C	LEC Project Team	Future Action	APP	Supplementary Evidence Attachment 1 (June 24/16) §4.2.3.7	
225	The distributed areas from PDD will be resided to their original grade to the extent practical and sected to allow for hardrane-vederation. Re-sect Hardrand S5 ROW and areas distributed by HDD to allow for natural re-vegetation	C	LEC Project Team LEC Project Team	Future Action Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
226	The boot national food of the second and the second of the second of the second of the second s	c	LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
227	If a drilling fluid release is detected the following procedures will be implemented +HDD Contractor will immediately begin containment efforts -HDD Contractor will begin steps to reduce released fluid volumes and pressure - Once containment has been established drilling will continue. If the amount of the release occurring exceeds that which can be contained and collected drilling operations will be suppended until released volumes can be brought under control.	С	LEC Project Team	As required	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
	- continue focused monitoring to ensure additional fluid releases have not occurred						
228	If a fluid release occurs, the HDD Contractor will contain and pump or vacuum up the fluid. On land the fluid that can not be recovered will be diluted and removed from vegetation by washing with water.	С	LEC Project Team	As required	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
229	If the amount of any adhing fluid release, either on land or within the lake, exceeds that which can be feasibly contained and collected, drilling operations will be suspended and the HDD Contractor will notify LEC and the appropriate regulatory agencies. Drilling will not resume until LEC and the appropriate regulatory agencies have approved a plan for recommencing drilling.	C	LEC Project Team	As required	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
230	All drilling fluid solids and outlings will be contained and settled in tanks or sediment traps, which will be disposed of at an approved facility. Water used in the drilling fluid will be recovered and reused during HDD operations after filtering out cuttings. Once the HDD is complete, the water used in the drilling fluid will be disposed of with the solids at an approved facility.	с	LEC Project Team	Future Action	APP	§4.2.3.7	
231	Avoidance of the spring spawning season will be considered as a possible additional measure for the final approach of the HDD to the receiving pit, which may have an increased potential for inadvertent release as cover over the drill path decreases (see HDD Contingency and Emergency Plan)	с	LEC Project Team	No Longer Applicable as per correspondence	SUP	Supplementary Evidence Attachment 1 (June 24/16)

	Operations and Maintenance Manual	C.	LEC Project Team	Future Action	EC	Condition 36	
	LEC shall file with the Board, at least sixty (60) days prior to the commencement of operations, an Operations and Maintenance Manual for the LEC electrical system. The Manual	°	LEOTIOJOCTICAI	i didic Actori	20	Conduion So	
	shall require the board address sky (or) days prior and commencements of operations, and operations and inhomencement address address sky (or) days prior and commencements of the LEC become address and address and inspections of the LEC become address addre						
	Manual. The Manual shall also include a schedule or procedure for its yearly review and update, as appropriate, to remain current with regulatory requirements and accepted industry practice. The Manual, and the programs and procedures on LEC's records as required by the Manual, shall be made available to the Board for periodic review. The Manual should the manual should be made and the programs and procedures on LEC's records as required by the Manual, shall be made available to the Board for periodic review. The Manual should the made available to the Board for periodic review. The Manual should proceed the manual should be appresented and the made available to the Board for periodic review. The Manual should the made available to the Board for periodic review. The Manual should the made available to the Board for periodic review. The Manual should the made available to the Board for periodic review. The Manual should the Manual should the made available to the Board for periodic review. The Manual should the Man						
	include, but not be limited to:						
	a) type of maintenance followed by LEC;						
	b) maintenance schedules according to the selected maintenance practice;						
251	c) operational procedures for steady state and transient conditions;						
	d) maintenance and monitoring requirements and plans for the power line (terrestrial and in-water cable) and the Haldimand Converter Station;						
	c) maintenance and monitoring requirements and plans for the perior interperior interperior and interval cable, and the hadmand converter dation, e) a public avarances program for the life of the Project that:						
	e) a public awareness program to the me of the Project that. i) promotes public awareness of ongoing hazards associated with the Project; and						
	") promotes public awareness of origoing hazardos associated with the Project, and						
	ii) provides contact numbers for the public to report issues and concerns;						
	f) vegetation control plans and procedures for the power line's right-of-way and the Haldimand Converter Station footprint;						
	g) training requirements for personnel implementing the Manual; and						
	h) the maintenance and operations records that will be produced during operations, including during the performance of maintenance tasks and routine inspections.						
	In order to address the potential increase in soil temperature from the underground AC and HVDC cables during operation, the trenches used for the majority of the installation would	С	LEC Project Team	Future Action	APP, IR	\$6.2.1.2. p 6-30	
252	be back-filled with low thermal resistivity bedding material as necessary.	-			,	App D, Table D-1	
						Response to IR 1&2 Attachment 3 (Sept 18/15)	
	Once construction is complete, disturbed areas will be re-graded to pre-existing contours and repaved or re-seeded with an appropriate seed mix to reduce erosion and sedimentation	C.	LEC Drainat Team	Future Action	APP	\$4,2,3,2	
	Once construction is complete, disturbed areas will be re-graded to pre-existing contours and repayed or re-seeded with an appropriate seed mix to reduce erosion and sedimentation	C	LEC Project Team	Future Action	APP		
253	potential. LEC will consult with Haldimand County and the Long Point Region Conservation Authority (LPRCA) to confirm the preferred seeding for the Haldimand Road 55 ROW.					§6.2.1.3, p 6-32	
		1			1		
	Once construction is complete, the area of the Haldimand Road 55 ROW will be returned to previous condition and roadside ditching will be restored. The underground cable route	С	LEC Project Team	Future Action	APP	§6.2.1.4, p 6-36	
	will be seeded as appropriate to return to its previous condition to the extent practical. LEC will submit the design to Haldimand County as part of the process to establish the	1	1	I	1		
254	permanent easement and will discuss revegetation of the Haldimand Road 55 ROW with Haldimand County to align with current municipal practice in the area. LEC will also address	1	1	I	1		
	requirements for drainage on OPG lands in discussion with OPG and Hydro One, as the design of the AC cable and Terminal Station on the OPG land proceeds.	1		1	1	1	1
		1		1	1	1	1
255	The HVDC and AC cable trenches located in the Haldimand Road 55 right-of-way will be restored in accordance with municipal and provincial requirements.	C	LEC Project Team	Future Action	IP	IR 4.5 a. b.1. b.2. b.3	1
200	The mode and the cable there is located in the material road as inter-orway will be resolved in accordance with municipal and provincial requirements. Restore construction area to original conditions to the extent practical and install above grade markers where the AC and HVDC transmission cables are buried outside of the public	č	LEC Project Team	Future Action	APP	84.2.2.2	1

IThe Project will operate within the terms and conditions of interconnection agreements between LEC, Penelec and PJM, and LEC and Hydro One. 0 LEC Project Team Future Action APP \$4.2.5.5 311 The Project will be operated in compliance with applicable IESO and PJM operating requirements and criteria as articulated in the IESO Market Rules and the PJM Open Access 0 LEC Project Team Future Action APP \$4.3.5 311 The Project will be operated in compliance with applicable IESO and PJM operating requirements and criteria as articulated in the IESO Market Rules and the PJM Open Access 0 LEC Project Team Future Action APP \$4.3.5 stability, both during normal operation and under recognized contingency conditions on the transmission system. 0 LEC Project Team Future Action APP \$4.3.5	
The Project facilities will be subject to NERC, NPCC, and ReliabilityFirst reliability standards. LEC will comply as necessary with reliability standards, respecting critical infrastructure 0 LEC Project Team Future Action APP §4.3.6 protection, including security management controls, to protect the operation, performance, integrity and reliability of the physical and cyber assets of the international power line and to provide demonstrable evidence of the reliability of the power system.	
313 LEC will, of course, operate the Project in compliance with all applicable IESO, NPCC, NERC and other reliability standards and criteria. O LEC Project Team Future Action IR IR 4.17c	
Compliance Reporting LEC shall file with the Board, within thirty (30) days of the date that the approved Project is placed in service, a confirmation, by an officer of LEC, that the approved Project was completed and constructed in compliance with all applicable conditions in this Certificate. If compliance with any of these conditions scannot be confirmed, the officer of LEC shall file with the Board details as to why compliance cannot be confirmed. The filing required by this condition shall include a statement confirming that the signatory to the filing is an officer of LEC shall file LEC.	
Annual Filing Requirements LeC shall like with the Board, prior to 31 January, on an annual basis, the following information: a) confirmation that LEC is still the owner and operator of the Project and the current contact information for LEC including: i) corporate headquarters street and mailing address; ii) phone number; ii) phone number; ii) phone number; ii) at number; ii) fax number; ii) at an unmber; ii) at an unmber; iii) at an unmber; iii) the anne and job title of a secondary contact at LEC; b) current insurance certificate(s) and updated details regarding the insurance and other financial instruments such as promissory note, line of credit, letter of credit or a detail accessible financial requirements for funds of at least \$1.5 million using acceptable financial instruments such as cash on hand, secured line of credit or letter of credit; i) at grantes the help cost of the set-aside of abandonment funds; i) an updated commitments tracking table as per Certificate Condition 8; ii) the amount of contracted supply in megawatts by type of generation source (where possible); and i) onfirmation that no changes were made to LEC is compliance program, safety manual, or operations and maintenance manual. If any changes have been made LEC is to provide a rationale and description of the change(s) if not already provided to the Board.	
316 Routine equipment maintenance and regular equipment inspections will be carried out to minimize the risk of inadvertent emissions to air. O LEC Project Team Future Action SUP Supplementary Evidence Attachment 1 (J	June 24/16)
LEC will implement a landscaping plan for the area outside the perimeter fence. 317 LEC will implement a landscaping plan for the area outside the perimeter fence. 4PP, IR §6.2.1.3, p.6-33 App I, Table D-1 Response to IR 182 Attachment 3 (Sept	18/15)
318 LEC will implement a weed control program as required during operations, particularly in the period of time that it takes to establish a landscaping plan for the Haldimand Converter O LEC Project Team Future Action APP §6.2.1.3, p 6-33 App D, Table D-1	
319 Vegetation (native grasses, perennials) will be planted on the site near the Haldimand Converter Station as part of the facility landscaping plan. O LEC Project Team Future Action APP, IR §6.2.1.3, p 6-33 Response to IR 182 Attachment 3 (Sept	
320 Ground maintenance, weed killing and pest control will be performed on the converter station site. O LEC Project Team Future Action IR Response to IR 1 Attachment 1 (Dec 18/-	15)
Planed maintenance tasks will include: Periodic, scheduled shut-downs of the Haldimand Converter Station for equipment inspections, testing and replacement - Vegetation management in the maintained buffer area around the Haldimand Converter Station - Periodic, scheduled start-up of the emergency generator 322 LEC will routine maintained inspect equipment for leakage. 0 LEC Project Team Future Action APP \$6,2,18, p. 6-47	
322 LEC will routinely maintain and inspect equipment for leakage. O LEC Project Team Future Action APP §6.2.1.8, p 6.47

331	Maintenance Plan Overview for Converter Station and AC & HVDC cables submitted to the NEB on December 18, 2015 contained commitments regarding maintenance including description and scheduled frequency.	0	LEC Project Team	Future Action	IR	Supplemental Response to IR 1 Attachment 1 (Dec 18/15)	
	description and scheduled requency. LEC will monitor the Haldimand Converter Station site and the AC and HVDC cable routes as needed to ensure that issues are identified and addressed appropriately. Post-	0	LEC Project Team	Future Action	APP	\$4.2.5.3	
	construction monitoring procedures will be designed to address any issues identified by LEC and its design team, as well as those identified by landowners and stakeholders through	Ŭ	LEO I TOJOCI TOUT	T didie Action	AL1	§6.3.1.2	
	the public consultation program.						
	Post-construction monitoring [will be conducted over two years, and on an as-needed basis thereafter to address issues that may continue or arise beyond that point, and] will include						
	monitoring and inspection of:						
332	- Haldimand Converter Station lands, the ROW of Haldimand Road 55 and on OPG lands for trench subsidence						
	 Reclamation status on the Haldimand Converter Station lands for those lands that were replanted after construction and along the cable routes Performance of the stormwater management system 						
	- Prioring to be sourced in an agence in system - - Plantings on the Haldmand Converter Station property and as necessary in off-site locations, in the event that planting is undertaken at a point of reception to address visual effects						
	 That and the Hadimand Converter Station property and is not used permanently and the cable notation, in the certer that planting is directation at a point of reception to access visual energies. 						
	Post-Construction Environmental Monitoring for Terrestrial Route	0	LEC Project Team	Future Action	EC	Condition 32	
	LEC shall file with the Board, on or before 31 January of each of the first, second, and third growing seasons following completion of construction of the Project, a post-construction						
	environmental monitoring report for the terrestrial portion of the Project that:						
	a) identifies any environmental issues that arose during construction or in the course of the previous year;						
333	 b) describes the methodology used for monitoring, the criteria established for evaluating success and the results found; c) describes measures LEC has taken to correct the issues; 						
333	C) describes measures LEC nais taken to context the issues, d) describes current status of the issues in a) and whether the issues are resolved or unresolved;						
	c) assesses the effectiveness of the mitigation (planned and corrective) measures applied against the criteria for success identified in b); and						
	f) provides a schedule for and description of further proposed measures that LEC will take to address any issues identified and unresolved in a) and d). All filed post-construction						
	environmental monitoring reports must address issues related to soils and weed management, as well as any other environmental issues that arose during or after construction (for						
	example, any issues related to species at risk or species of special concern, and to wildlife and wildlife management).						
334	Operation of the underwater HVDC cables in accordance with the methods and applicable regulations and guidance materials	0	LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
336	Application of the same mitigation measures as applied during construction in the event that cable repair is required Notification to the Canadian Hydrographic Service in writing on completion of the underwater HVDC cable installation to facilitate the addition of the cable route to nautical charts and	0	LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
337	Promisation to the caracterian hydrographic Service in writing on completion of the underwater HVDC cable installation to lacitate the addition of the cable route to natural charts and publications to minimize the risk associated with anchor drop	0	LEC Project Team	Future Action	50P	Supplementary Evidence Attachment 1 (June 24/16)	
	Departation of High Voltage Direct Current (HVDC) Transmission Line and Converter Station (HVDC Link)	0	LEC Project Team	Future Action	FC	Condition 39	
	a) LEC shall operate the HVDC Link as per design and specifications consistent with the electrical reliability standards applicable to the Project; and	-					
	b) LEC shall inform the Board of any operational deviation from design and specifications, within forty-eight (48) hours of such operational deviation occurring, and shall file with the						
339	Board, within sixty (60) days after the operational deviation has occurred, a written report that shall include:						
	i) the reasons why the deviation occurred;						
	 ii) analysis of potential negative implications of the deviation to the HVDC Link; and iii) mitigation strategies for the implications identified in paragraph b.2) and when the mitigation was or will be implemented. 						
-	my minigation satisfies for the implications between the paragraph of a more than the implant of the project will be implemented.
