1	The proposed Project and its connections to the PIM and IESO systems will be designed, constructed and operated in compliance with applicable NERC reliability standards or other applicable reliability standards, and will meet the requirements of NEB General Order MO-036-2012 titled "NEB General Order on Reliability Standards". [T] of the extent limit the Project facilities are deemed to be Critical Infrastructure the facilities will be designed, constructed and operated to meet all applicable Critical Infrastructure Protection requirements as defined by NERC or other applicable standards authority.	ALL	ITC LEC Project Team	In Progress	APP	§4.3.7 §4.3.9	
2	ITC Lake Erie will comply with all regulations in effect during construction, operation, and decommissioning.	ALL	ITC LEC Project Team		APP	§6.3.1	
3	regulatory requirements, and any additional commitments required under the terms and conditions of the NEB Application.	ALL	ITC LEC Project Team		APP	§6.3.1.1	
4	Condition Compliance	ALL	ITC LEC Project Team	In Progress	EC	Condition 1	
5	ITC Lake Erie shall comply with all of the conditions contained in this Certificate unless the Board otherwise directs. Implementation of all Commitments ITC Lake Erie shall implement cause to be implemented all of the policies, practices, mitigative measures, recommendations, and procedures for the protection of the environment	ALL	ITC LEC Project Team	In Progress	EC	Condition 3	
6		ALL	ITC LEC Project Team	In Progress	EC	Condition 4	
-	Application or as otherwise agreed to in its related submissions. Notification of Protection Modifications	ALL	ITC LEC Project Team	As required	EC	Condition 7	
7	TIC Lake Erie shall seek approval from the Board of any proposed modification to the ITC Lake Erie electrical system before any modification is made.		TO ELOT TOJECCICAIN	Astequied	20		
8	depending on the interests of potentially impacted Aboriginal groups and their respective consultation protocol requirements.	ALL	ITC LEC Project Team	In Progress	APP, IR	§5.3.1 §5.3.3 §5.3.6 §5.3.7 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	Updates on consultation and engagement activities provided to the NEB on November 25, 2016 and July 6, 2018. Indigenous Engagement Updates provided to the CEF on April 16, 2020, June 16, 2021, July 14, 2021, and April 19, 2022.
	Updates on engagement activities will be provided throughout the regulatory process by way of supplementary filings.					IR 3.1c Response to IR 3 Attachment 1 (Jan 29/16)	
9	ITC Lake Erie will continue to engage with Crown agencies to assess how it can appropriately assist the Crown in carrying out its obligations.	ALL	ITC LEC Project Team	In Progress	APP	§5.3.1	
10	To date, no significant concerns regarding EMF have been received from the public. Should any comments or concerns be received, ITC Lake Erie will develop appropriate responses.	ALL	ITC LEC Project Team		IR	IR 4.10 (HC-04)	
11	TC will purchase a Canadian property policy that will cover only Canadian assets and business income at limits and deductibles appropriate to the Project. These limits and deductibles have not yet been determined. No assets other than those related to ITC Lake Erie will be covered by this policy. It is expected that liability coverages for ITC Lake Erie (including any Directors and Officers) will be added to existing corporate policies, and the cost for these policies will be added to existing corporate policies, and the address the Project.	ALL	ITC LEC Project Team	Future Action	IR	IR 4.13b	
12	Acquisition required in advance of construction will be completed in advance of the scheduled start of construction, including receipt of the Land Use Permit from the Ministry of Natural Resources and Forestry (MNRF). Following completion of the installation of the underwater HVDC cable, the MNRF process for the long-term easement of the transmission line would be completed based on a survey of the 'as built' coacion of the cable.	ALL	ITC LEC Project Team	In Progress	IR	IR 3.6a, b, d, e	
13	Permanent tenure on the Lake Erie lakebed for the underwater HVDC cable alignment will be sought in accordance with the MNRF land disposition process.	ALL	ITC LEC Project Team	In Progress	APP	§7.1.5	
14	As the PJM Facilities Study is not complete, PJM has not issued ITC Lake Erie the draft Interconnection Services Agreement (ISA). Under the PJM Tariff, the draft ISA will be issued after the Facilities Study is issued.	ALL	ITC LEC Project Team	Future Action	IR	IR 4.15b	
15		ALL	ITC LEC Project Team		IR	IR 4.15a	Filed with the NEB on August 19, 2019.
16		ALL	ITC LEC Project Team		APP	§6.2.1.2, p 6-28 IR 3.10a	
17	[A] Stage 4 excavation mitigation of developmental impacts will be carried out within the required area identified in the Stage 3 Archaeological Assessment. This work is scheduled to commence in the spring of 2016 and is anticipated to be complete and submitted to the Ontario Ministry of Tourism, Culture and Sport and the National Energy Board by September 30, 2016.	U	ITC LEC Project Team		IK		
18	The Haldimand Converter Station will be designed in accordance with the applicable standards for electromagnetic compatibility limits and will not exceed the design criterion for interference levels.	D	ITC LEC Project Team	In Progress	APP	§4.2.5.5	
19	The Haldimand Converter Station will be designed with closed-cycle cooling systems for the on-site equipment for the maximum average daily 24 hour temperature per month.	D	ITC LEC Project Team	In Progress	APP	§6.2.1.1, p 6-26 App D, Table D-1	
20	Shielding (shield wires), grounding, insulation and surge arresters will be installed to protect the Project infrastructure from damage related to lightning strikes.	D	ITC LEC Project Team	Future Action	APP	§6.2.1.1, p 6-26 App D, Table D-1	
21	The Project will be designed to address potential for effects from atmospheric deposition.	D	ITC LEC Project Team	In Progress	APP	§6.2.1.1, p 6-26 App D, Table D-1	
22	The final location of the Terminal Station and the point of connection with the Nanticoke TS switchyard will be confirmed through discussions with OPG and Hydro One. If the location differs from the proposed location north of the Nanticoke TS switchyard, ITC Lake Erie will undertake additional studies as required.	D	ITC LEC Project Team	Ů	SUP	Supplementary Evidence Attachment 4 (Feb 26/16)	
23	Converter Station lighting design will avoid illuminating the woodland, so roosting bats will not be exposed to artificial light.	D	ITC LEC Project Team		IR	Response to IR 3A Attachment 2 (Mar 11/16)	
24	Building foundations on the Haldimand Converter Station site to be designed in accordance with the Preliminary Geotechnical Report for the Haldimand Converter Station.	D	ITC LEC Project Team	Ů	SUP	Supplementary Evidence Attachment 2 (June 24/16)	
25	Soil electrical resistivity testing is currently being completed. Based on information gathered from this testing an overall site grounding study will be prepared. That study is anticipated to be completed by early spring 2017.	D	ITC LEC Project Team	-	IR	IR 1.2f (Aug 4/15)	
26	ITC Lake Erie will use an emergency diesel generator that meets MOECC requirements.	D	ITC LEC Project Team	Future Action	APP, IR	<ul> <li>§6.2.1.8, p 6-47</li> <li>§6.2.1.15, p 6-72</li> <li>App D, Table D-1</li> <li>Response to IR 1&amp;2 Attachment 3 (Sept 18/15)</li> </ul>	
27	Drinking water for the Haldimand Converter Station will be hauled to the site and stored in a cistern.	D	ITC LEC Project Team		IR	IR 3.28	
28	The fibre optic cable will be approximately 35 mm in diameter with a weight of approximately 3.0 kg/m.	D	ITC LEC Project Team		IR ABB ID	IR 5.3	
29	To reduce or eliminate EMF exposure, the Project will use an HVDC transmission system; shielding to minimize electric field emissions; and burying the cables in the lake sediment to minimize exposure.		ITC LEC Project Team		APP, IR	\$6.2.2.6, p.6-104 \$6.2.2.7, p.6-107 \$6.2.2.10, p.6-112 \$6.2.2.14, p.6-122 \$6.2.2.16, p.6+125 App D, Table D-1 App D, Table D-2 Response to IR 1&2 Attachment 3 (Sept 18/15)	
		D	ITC LEC Project Team		IR	IR 5.2a	
	The jet plow design will be finalized during detailed design of the Project. Jet plow procedures for installing the cable and for cable approach/landing with the jet plow will be confirmed during detailed design.	D	ITC LEC Project Team ITC LEC Project Team		IR IR	IR 5.4a

Number	Commitment Description	Project Stage[1]	Accountable Lead	Status		Where Commitment Made	Comments
					Document [2]		
34	The foundations for the Haldimand Converter Station and Terminal Station will be constructed in accordance with local and provincial building code requirements, which are in compliance with the National Building Code of Canada.	D; C	ITC LEC Project Team	Future Action	IR	IR 7.5b	
35	The HVDC cable system will be protected by high-speed protection systems located at the two converter stations. The 500 kV AC cable system and interconnection facilities will be protected by high-speed protection systems located at the Haldimand Converter Station and the Nanticoke TS switchyard and will be designed in accordance with the requirements of Hydro One.	D	ITC LEC Project Team		APP	§4.2.5.5	
36	ITC Lake Erie will develop and apply for approval of a private sewage system designed to meet municipal requirements and applicable codes.	D	ITC LEC Project Team	In Progress	APP, IR	§6.2.1.4, p 6-34 §6.2.1.4, p 6-37 §6.2.1.15, p 6-71 IR 4.10 (HC-03)	
37	The final detailed design for the Project is expected to be completed by early 2019 under the current Project schedule, and would be provided to the [National Energy] Board at that time.	D	ITC LEC Project Team	, s	IR	IR 1.2i (Aug 4/15)	
38	The schematics of the converter's protection system, primary and back-up protective devices, circuit breakers, and metering devices will be addressed during detailed design. The final detailed design for the Project is expected to be completed by early 2019 under the current Project schedule, and will be provided to the [National Energy] Board at that time.	D	ITC LEC Project Team		IR	IR 1.2d (Aug 4/15)	
39	The type of protections and protected items on the DC side and protections unique for HVDC systems (converter) will be addressed as part of the detailed design which is expected to be completed by early 2019 under the current Project schedule, and will be provided to the [National Energy] Board at that time.		ITC LEC Project Team	-	IR	IR 1.2e (Aug 4/15)	
40	Ethylene glycol will be used as an antifreeze agent in the outdoor cooling circuit for the Haldimand Converter Station. The outdoor cooling circuit will be installed over an impermeable concrete slab with berms sufficiently high to contain possible ethylene glycol spills.		ITC LEC Project Team		IR	IR 4.10 (HC-02)	
41	The Long Point National Wildlife Area (NWA) is located approximately 7 km west of the closest part of the project, the HVDC underwater cable route. In the event that the location of the cable route or any project activities should change to occur within 5 km of the NWA, Environment and Climate Change Canada (ECCC) will be contacted as recommended.	D	ITC LEC Project Team	As required	IR	IR 4.11 (ECCC 3)	
42	ITC Lake Erie has consulted with the MNRF regarding the Crown land disposition process. ITC Lake Erie will continue this engagement in support of the land disposition process which will proceed concurrently with the NEB Application process.	D	ITC LEC Project Team		APP	§4.1.1.2	
43	Lab results for borehole samples along the cable route will be provided to Environment and Climate Change Canada upon issuance of the results to the NEB.	D	ITC LEC Project Team		IR	Response to IR 3 Attachment 2 (Jan 29/16)	
44	The requested draft Environmental Protection Plan will be prepared and submitted to the NEB by June 24, 2016.	D	ITC LEC Project Team		IR	IR 3.20	
45	ITC Lake Erie will complete a quantitative assessment of the GHG emissions expected to result from the construction of the Lake Erie Connector including items as outlined in IR 7.15a, b and c.	D	ITC LEC Project Team	Ů	IR	IR 7.15	
46	The Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan will be completed and included in the Environmental Protection Plan and provided to the NEB [by June 24, 2016].	D	ITC LEC Project Team		IR	IR 3.25a	
47	The Inadvertent Returns Plan will be included in the Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan and provided to the NEB (by June 24, 2016).	D	ITC LEC Project Team		IR	IR 3.25b	
48	Details on monitoring that will be conducted during HDD activities, as well as stop work thresholds (if required) will be included in the Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan and provided to the NEB (by June 24, 2016).	D	ITC LEC Project Team		IR	IR 3.25c	
49	The final HDD drill path will be determined during detailed design and will be provided to the NEB when confirmed.	D	ITC LEC Project Team		IR	IR 7.1b.1	
50	The final HDD drill path, HDD entry and exit points, and drill angles will be confirmed during detailed design (anticipated in Q3 2017) and provided to the NEB when complete.	D	ITC LEC Project Team	, i	IR	IR 7.1b.2	
51	The No-Drill Zone (minimum drill path cover by location) will be identified as part of detailed design and will be provided to the NEB when complete. The geotechnical analysis (Preliminary Geotechnical Report Lake Erie HVDC Project – Canadian Shore-line Horizontal Directional Drilling, Haldimand County, Ontario) submitted to	D	ITC LEC Project Team		IR	IR 7.1b.3	
52	the NEB as Attachment 4 on June 24, 2016 provides detailed soil stratigraphy in the area along the anticipated HDD trajectory and drill path. Additional detail on soil stratigraphy along the drill path will be provided to the NEB when the final drill path is determined during detailed design.	D	ITC LEC Project Team	5	IR	IR 7.1b.4	
53	A Navigation Safety Plan will be included as part of the Environmental Protection Plan (EPP) [and will be submitted to the NEB by June 24, 2016].	D	ITC LEC Project Team		IR	IR 3.8b	
54	A detailed scheduled outage plan with description of methods, actions, operations, processes and a detailed activities program will be prepared during the detailed design phase of the project. Planned outages will be programmed to be as short as possible, depending on maintenance requirements and will be scheduled as far in advance as possible, taking all stakeholder needs into consideration. Pre-outage planning will be detailed and thorough, ensuring resources are adequately matched to workload.	D	ITC LEC Project Team		IR	Response to IR 1 Attachment 1 (Dec 18/15)	
55	Installation and test plans are part of the quality control monitoring system developed for the Project, and will be developed during detailed engineering.	D	ITC LEC Project Team		APP	§4.2.5.2	
<u>56</u> 57	Preliminary geotechnical results for the Canadian shoreline are under analysis and a report with this information will be submitted to the NEB when completed. The Preliminary Geotechnical Report on the Canadian cable route in Haldimand County will be provided to the NEB on July 6, 2016.	D	ITC LEC Project Team ITC LEC Project Team		IR SUP	IR 5.6a Supplementary Evidence (Jun 24, 2016)

68	Adherence to In-Water Restricted Activity Timing Windows ITC Lake Erie shall file with the Board for approval, at least sixty (60) days prior to the commencement of construction of the in-water trench: a) the relevant in-water restricted activity timing windows for the proposed Project; b) the finalized timing of the in-water trench construction; c) in the event that in-water trench construction; c) in the event that in-water trench construction will not adhere to the in-water restricted activity timing windows, the rationale for why, and mitigation measures to be applied; and d) a summary of ITC Lake Erie's consultation with regulatory agencies (e.g., Ontario Ministry of Natural Resources and Forestry) in relation to the matters set out in a) to c). This summary must include any issues or concerns raised and how ITC Lake Erie has addressed or responded to those issues or concerns.	PC; C	ITC LEC Project Team	Complete	EC	Condition 19	Response to Condition 19 filed with the NEB on August 10, 2018.
	Blasted In-Water Excavation and Backfill Material ITC Lake Eric shall file with the Board, at least one hundred twenty (120) days prior to the commencement of construction, the location of the identified source for the proposed crushed limestone borrow material to be used for the backfilling of the blasted in-water trench.	PC	ITC LEC Project Team	Future Action	EC	Condition 13	
	Commitments Tracking Table TC Lake Erie shall file with the Board and post on its website, at <b>least thirty (30) days prior to the commencement of construction</b> , a commitments tracking table listing all commitments made by ITC Lake Erie in its Application, and otherwise agreed to during questioning or in its related submissions, including references to: ) the documentation in which the commitment appears (for example, the Application, responses to information requests, hearing transcripts, permit requirements, condition filings, or other documentation); ii) the accountable lead for implementing each commitment; and iii) the estimated timelines associated with the fulfillment of each commitment.	PC	ITC LEC Project Team	Future Action	EC	Condition 8a	
71	Commitments Tracking Table TC Lake Erie shall file with the Board, at the following times, an updated commitments tracking table: )) within ningky (90) days after the certificate date	PC	ITC LEC Project Team	Complete	EC	Condition 8bi	Ver. 1 submitted to NEB September 25, 2017.
	Commitments Tracking Table TC Lake Erie shall file with the Board, at the following times, an updated commitments tracking table: i) at least thirty (30) days prior to commencement of construction	PC	ITC LEC Project Team	Future Action	EC	Condition 8bii	
73	Transmission Contracts TTC Lake Erie shall file with the Board, at least sixty (60) days prior to the commencement of construction, confirmation that ITC Lake Erie has executed the necessary long- term transmission contracts for the Project.	PC	ITC LEC Project Team	Future Action	EC	Condition 29	
74	TTC Lake Erie will include compliance monitoring as part of the EPP associated with the Project including inspection, monitoring, and follow-up. Existing Best Management Practices, regulations, and agency direction will be included in the EPP as appropriate. Compliance Pragram.	PC	ITC LEC Project Team		APP	§6.3.1 Condition 9	
75	ITC Lake Erie shall file with the Board for approval, <b>at least ninety (90) days prior to the commencement of construction</b> , a Quality Assurance and Compliance Program. The Program shall describe the methods by which TC Lake Erie shall ensure the Project described in the Application is designed, constructed and operated in conformity with the conditions of the certificate, designs, specifications, and undertakings set forth in its Application is designed, constructed and operated in conformity with the doubt not be limited to: a) a process or procedure to identify conditions of approval, company designs, specifications and undertakings set forth in the Application or otherwise adduced in ITC Lake Erie's evidence; b) processes or procedures to monitor, measure, document and report on compliance with conditions of approval, company designs, specifications and undertakings set forth in the Application are designed, construction, and undertakings set forth in the Application or otherwise adduced in ITC Lake Erie's evidence; b) processes or procedures to monitor, measure, document and report on compliance with conditions of approval, company designs, specifications and undertakings set forth in the Application or otherwise adduced in ITC Lake Erie's evidence; c) the position it the and contact information of the person(s) responsible for each aspect of the Program; d) the qualifications, contact information, description of the job role and the position title of the person(s) who is authorized to stop work should the work be in non-conformity with conditions of approval, company designs, specifications and undertakings set forth in the Application or otherwise adduced in ITC Lake Erie's evidence; e) a process or procedure to identify and implement any corrective actions as a result of any non-conformance; and g) methods by which adherence to the Program shall be monitored, measured, documented and reported to ITC Lake Erie's management.						
	Reliability, Safety, and Security of International Power Lines ITC Lake Erie shall: a) comply with the provisions of Board Order MO-036-2012 electric reliability; and b) file with the Board a list of reliability standards applicable to the Project, <b>at least sixty (60) days prior to commencement of construction</b> .	PC	ITC LEC Project Team	Future Action	EC	Condition 17	
77	Design and Interconnection Compliance TC Lake Erie shall file with the Board for approval, at least sixty (60) days prior to the commencement of construction, a report confirming that the design of facilities, construction plan, and planned operations comply with the following: a) ITC Lake Erie's 500 kV equipment has been designed for a continuous voltage rating of at least 550 kV; b) ITC Lake Erie's protective relaying system will be set to ensure that transmission equipment remains in-service for the voltage range between 94% of the minimum continuous value and 105% of the maximum continuous value; c) ITC Lake Erie's connection equipment has been designed to be fully operational within -40 degrees C to +40 degrees C ambient air temperature; and d) ITC Lake Erie has made provision in the design of protections and controls of the Project to allow for future installation of Special Protection Scheme equipment that complies with the Northeast Power Coordinating Council reliability requirements.	PC	ITC LEC Project Team		EC	Condition 21	
78	Environmental Compliance Manager Qualifications ITC Lake Fire shall file with the Board, at least twenty one (21) days prior to commencement of construction, confirmation that a qualified environmental compliance manager shall be on site during construction to carry out appropriate inspections and monitor compliance with the final EPP. ITC Lake Erie shall include the qualifications, environmental education and experience, roles and responsibilities, decision-making authority, and reporting structure of each environmental compliance manager assigned to the Project that will be on site to monitor the effectiveness of erosion and sedimentation control measures, multi-functional barriers for wildlife exclusion, and any other applicable environmental mitigation measures that would be put in place during construction, as well as implementing any contingency plans as necessary, and performing any other duties outlined in the final EPP.	PC	ITC LEC Project Team	Future Action	EC	Condition 25	
79	Qualified Aquatic Specialist ITC Lake Erie shall file with the Board, at least fourteen (14) days prior to the commencement of construction, confirmation that a qualified aquatic specialist shall be on site during construction. ITC Lake Erie shall include the qualifications and experience, roles and responsibilities, decision-making authority and reporting structure of each aquatic specialist assigned to the Project that will be on site during blasting activities and HDD.	PC	ITC LEC Project Team		EC	Condition 26	
80	Other Approvals and Permits TC Lake Erie shall file with the Board, at least fourteen (14) days prior to commencement of construction, confirmation by an officer of ITC Lake Erie that all necessary approvals and permits have been obtained for the Project from the organizations listed in Section 4.4.2 of the Application – "Other Approvals and Permits". ITC Lake Erie shall also include in the filing any commitments made or requirements attached to any permits or approvals so issued.	PC	ITC LEC Project Team		EC	Condition 27	
81	Haldimand Converter Station Foundation Design ITC Lake Erie shall file with the Board for approval, at least ninety (90) days prior to the commencement of construction, a final geotechnical detailed design report that sets out the design parameters and methodologies recommended to design the foundations of the structures at the Haldimand Converter Station in accordance with the National Building Code of Canada.	PC	ITC LEC Project Team	Future Action	EC	Condition 12

82	In-Water Third Party Facilities Crossing Plan ITC Lake Erie shall file with the Board for approval, <b>at least ninety (90) days prior to the commencement of construction</b> , a plan setting out details as to how the Project will cross third party in-water facilities, including: a) minimum burial depth; b) proximity of the cable to all existing third party facilities; c) construction procedure; and d) confirmation that the information filed is in accordance with the agreements or crossing permits.	PC	ITC LEC Project Team	Future Action	EC	Condition 18	
83	Following the delineation of the detailed terrestrial and underwater cable routes after the in-water survey and prior to construction, a series of more detailed cable route alignment sheets will be prepared at a suitable scale to identify environmental constraints and other potential issues. The EPP, alignment sheets, and draft plans will be available prior to construction.	PC	ITC LEC Project Team	In Progress	APP	§6.3	
	An EPP will be developed that will include mitigation measures for fugitive dust during construction. These measures will be consistent with those typically deployed for construction activities in Ontario for projects of a similar scale and location. Dust control during construction will be addressed through various operational methods such as watering, staging of work, erosion and sedimentation control measures (i.e., sill fencing), and re-vegetation of disturbed areas.	PC; C	ITC LEC Project Team			IR 4.11 (ECCC 5)	
	The EPP noted above [IR 4.11 ECCC 5] will indicate the conditions under which mitigation measures for fugitive dust will be deployed. ITC Lake Erie will consult with Haldimand County in regards to any required zoning variances (height, set-backs) for the Haldimand Converter Station.	PC; C	ITC LEC Project Team ITC LEC Project Team			IR 4.11 (ECCC 6) §6.2.1.11, p 6-57	
86		10				App D, Table D-1	
87	ITC Lake Erie also intends to carry out pre-construction information sessions to inform the community in the vicinity of the Project in advance of construction and respond to questions or potential concerns.		ITC LEC Project Team			IR 4.1c	
88	Pre-construction communication with local boating associations will limit interactions with local boating activities.	PC	ITC LEC Project Team			§6.2.2.11, p 6-115 App D, Table D-2 Response to IR 1&2 Attachment 3 (Sept 18/15)	
89	The Cultural Heritage Resource Discovery Contingency Plan will address the unlikely discovery of archaeological or cultural heritage resources. ITC Lake Erie will prepare a Project-specific EPP prior to construction for the Lake Erie Connector addressing NEB Application requirements which will:	PC; C PC	ITC LEC Project Team ITC LEC Project Team			§6.3 \$6.3	
90	It C Lake Error will prepare a Project-specific EPP profit of construction for the Lake Error Connector acoressing NEB Application requirements which will: - Reflect all commitments and requirements in relation to the design, planning, construction, and operation of the Lake Error Connector - Include mitigation measures to be implemented during construction, operation, and decommissioning to reduce the environmental impact of the Project on the environment as outlined in the ESEA (Section 6.2) - Identify appropriate communication and training protocols and ensure they are in place and that staff have been appropriately trained in their implementation - Identify appropriate communication and training protocols and ensure they are in place and that staff have been appropriately trained in their implementation - Identify approximation and responsibilities for carrying out practices and procedures	PC	TIC LEC Project Team	Future Action	APP	Ş0.3	
	ITC Lake Erie confirms that the final EPP will include all items as listed in IR 7.6a.1 through 7.6a.8.	PC	ITC LEC Project Team	Future Action		IR 7.6a	
	ITC Lake Erie confirms that the Final EPP will include assignment of accountabilities and responsibilities for the Environmental Compliance Manager. The EPP will be updated and revised as necessary through detailed design and will be filed with the NEB when completed.	PC PC	ITC LEC Project Team ITC LEC Project Team			IR 7.8b Supplementary Evidence Attachment 1 (June 24/16)	
94	Environmental Protection Plan (EPP) ITC Lake Erie shall file with the Board for approval, at least sixty (60) days prior to the commencement of construction, a final and updated project specific EPP, which it has committed to implement. The EPP shall describe all environmental protection procedures, and mitigation and monitoring commitments, as set out in ITC Lake Erie's Application or as otherwise agreed to in its related submissions. The EPP shall use clear and unambiguous language that confirms ITC Lake Erie's intention to implement all of its commitments. Construction will not commence until ITC Lake Erie has received approval of its EPP from the Board.	PC	ITC LEC Project Team		EC	Condition 20	
95	Prior to construction, an erosion and sedimentation control plan will be developed. The Erosion and Sedimentation Control Plan will identify control measures and best management practices to address management of soils and water discharges from work and stockpile areas.		ITC LEC Project Team			§4.2.3.2 §6.3	
96	The Erosion and Sedimentation Control Plan was developed to a sufficient level of detail in accordance with local and provincial standards. ITC Lake Erie confirms that items as listed in 7.12 a.1) to 7.12 a.5) and 7.12 b) will be updated as required during detailed design and will be included in the Final EPP.		ITC LEC Project Team			IR 7.12	
97	The ITC Lake Erie Connector Emergency Response Plan (ERP) for construction will be completed during detailed design and the construction planning stages. The ERP for construction will be provided to the NEB when complete and no later than three (3) months prior to start of construction.	PC	ITC LEC Project Team			IR 6.1	
	Quantitative Estimation of Direct, Project-related Greenhouse Gas (GHG) Emissions from Construction ITC Lake Eife must file with the Board, at teast ninety (90) days prior to the commencement of construction: a) quantitative estimation and assessment of greenhouse gas emissions expected to directly result from each activity, including clearing, during construction of the Project, including, but not limited to, emissions generated by vessels, vehicles, and equipment, and b) a description of the calculation methodology used in the estimation and assessment, the assumptions and inputs used, and any variables that may affect the results.	PC	ITC LEC Project Team	Future Action	EC	Condition 28	
99	Construction Safety Manuals ITC Lake Eric shall file with the Board, <b>at least ninety (90) days prior to the commencement of construction</b> : a) safety manualis related to the construction of the Project. The manuals must address construction procedures, activities, and public safety issues for the following: a) terrestrial and in-water cable installation, including details on the post-lay burial procedure; b) Hadimand Converter Station construction; b) Hadimand Converter Station construction; iv) navigation limitations to lake traffic during construction; b) an outline of the safety training program to be implemented for the operation of the Project.	PC	ITC LEC Project Team	Future Action	EC	Condition 14	
100	ITC will require MNRF (Oil and Gas) approval for HDD installation including disclosure of potential additives that may be used.		ITC LEC Project Team			IR 7.3b	
101	An Inadvertent Return Plan [for HDD] will be developed which will specify how to monitor for, identify, contain, and remediate releases of drilling fluid. Descriptions of drilling fluid (e.g., material safety data sheets) will also be included in the plan.		ITC LEC Project Team			§4.2.3.7 Throughout §6.2.1 and §6.2.2 §6.3 §6.3.1.2 App D, Table D-2	
	The Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan including the Inadvertent Return Plan will be completed once the detailed drill design is complete later in the design process for the Project. The Inadvertent Return Plan will specify how to monitor for, identify, contain, and remediate releases of drilling fluid. Details on monitoring that will be conducted during HDD activities, as well as stop work thresholds (if required) will be included in the Horizontal Directional Drilling (HDD): Contingency Plan and Emergency Plan.		ITC LEC Project Team			IR 4.11 (ECCC 4)	
103	ITC Lake Erie will provide a detailed description of the contingency plan should HDD installation fail including consideration of alternate installation methods in the final HDD Contingency Plan that will be provided to the NEB three months prior to construction.	PC	ITC LEC Project Team			IR 7.2	
104	Horizontal Directional Diriting (HDD) and Contingency Plan ITC Lake Eric Sharif fer with the Board for approval, <b>at least ninety (90) days prior to the commencement of construction</b> : a) a drawing showing the HDD drill path, entry and exit points, the anticipated drill angles at the entry and exit points, the no drill zone, and the soil stratigraphy along the HDD trajectory based on the available borrehole information; b) a contingency plan to provide an alternative method of installation along the Canadian shore-line in the event that the HDD procedure is not successful; and c) confirmation by an authorized officer of ITC Lake Erie based on the available information, that the HDD installation can be completed in a manner consistent with safety and reliability.	PC	ITC LEC Project Team	Future Action	EC	Condition 11

Version 58 September 1 - September 30, 2022

Updated:	31-Oct-22						
Number	Commitment Description	Project Stage[1]	Accountable Lead	Status		Where Commitment Made	Comments
400		0	ITO LEO DULLA T	Future Asting	Document [2]		
182	A minimum separation distance of 20 m will be maintained between the cable routes and the wetland and watercourse features on the Haldimand Converter Station site. Use of neutral colours for the Haldimand Converter Station will reduce the potential for visual distraction.	C	ITC LEC Project Team ITC LEC Project Team		APP. IR	§4.2.3.5 §6.2.1.14, p.6-68	
183	use of neutral colours for the Halumano Converter Station will reduce the potential for visual distraction.	C	TIC LEC Project Team	Puture Action	APP, IK	\$6.2.1.14, p 0-00 \$6.2.1.15, p 6-72 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
184	Dewatering discharges during construction will be addressed in accordance with best practices and LPRCA requirements.	С	ITC LEC Project Team	Future Action	APP, IR	§6.2.1.4, p 6-38 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
185	The Site Construction Manager will be responsible for overseeing and coordinating inspection measures during construction. This person will communicate with municipal and regional staff to develop traffic control and safety measures, including modified routes for emergency response during construction.	с	ITC LEC Project Team	Future Action	APP	§6.3.1.1	
186	Construction and installation techniques will be used to minimize potential effects on pipeline crossings.	С	ITC LEC Project Team	Future Action	APP, IR	§6.2.2.11, p 6-115 App D, Table D-2 Response to IR 1&2 Attachment 3 (Sept 18/15)	
187	The jet plow installation will be pre-planned to avoid lakebed sediments that have insufficient loadbearing capacity to support the jet plow along the underwater HVDC cable route from KP15 to KP55. In areas where the load bearing capacity of the lake bed is insufficient to support the jet plow, the underwater HVDC cable will be installed utilizing post-lay burial RVOs with water jets.	с	ITC LEC Project Team	Future Action	IR, FIL	IR 5.A.2a General Update (Oct 14/16)	
	In sediments that are too soft to support the jet plow, the ROV will bury the cable approximately 2 m below the lakebed using 2 m jetting spears and a 2 m depressor arm. Construction Progress Reports	с	ITC LEC Project Team	Future Action	EC	Condition 30	
	ITC Lake Erie shall file with the Board, at the end of each month during construction, construction progress reports. The reports shall include information on the activities carried out during the reporting period, as well as any environmental, safety and security issues and non-compliances that arose and the measures undertaken for the resolution of each issue and non-compliance. The first report shall include a schedule for anticipated submission of each monthly report unit construction is complete.		,				
189	ITC Lake Erie will implement a construction management plan, including protocols to minimize engine idling and maintain vehicles.	с	ITC LEC Project Team	Future Action	APP	§62.1.11, p.6-57 §62.1.14, p.6-68 §62.1.15, p.6-71 §6.2.1.16, p.6-76 App D, Table D-1	
190	Implement appropriate fugitive dust control measures such as watering, staging of work, and erosion and sedimentation control measures (i.e., silt fencing), and re-vegetation of disturbed areas. Fugitive dust control measures will be implemented as required.	с	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
191	Construction activities, including traffic management will be coordinated with the Haldimand County Roads Department and adjacent property owners as appropriate to minimize disruption during installation.	с	ITC LEC Project Team	Future Action	APP	§4.2.3.2 §4.5.7 Supplementary Evidence Attachment 1 (June 24/16)	
193	ITC Lake Erie will coordinate with the appropriate utilities during installation of the AC and HVDC cables.	с	ITC LEC Project Team	Future Action	APP, IR	§6.2.1.16, p 6-76 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
194	Should there be noise complaints by landowners and the public ITC Lake Erie will address such complaints as required and in a manner consistent with the requirements of the NEB Act and the Electricity Filing Manual.	с	ITC LEC Project Team		IR	IR 4.10 (HC-06)	
	Follow Best Management Practices for erosion and sediment controls	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
196	Install multi-functional barriers with integrated erosion controls as appropriate	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
197	Retain existing vegetation and stabilize exposed soils where possible	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
198	Limit the size and duration of soil exposure and phasing construction when possible	C	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
	Minimize nonessential clearing and grading Minimize slope length and gradient of disturbed areas	C	ITC LEC Project Team ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
	winimize such engin and graderit of disturbed areas Store/stockpite soil away from watercourses, drainage features and top of steep slopes	c	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/10)	
	Sole stockpie sole way non watercourse, unanage textures and up or steep sopes Follow the construction sequencing provided in the design	c	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/10)	
	To low the constants of particular product in the casion in the casion in the casion sequence of the constant	c	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
	ITC Lake Erie will implement stormwater management and erosion and sediment control plans to provide quantity and quality control for surface runoff. ITC [Lake Erie] will implement erosion and sedimentation control measures and best management practices during construction of the Haldimand Converter Station and installation of the AC and HVDC cables including an inadvertent return plan for HDD installation.	c	ITC LEC Project Team		APP	\$6.2.1.2, p 6-28 \$6.2.1.15, p 6-72 App D, Table D-1	
205	Install and maintain erosion and sediment control devices during construction in accordance with the Erosion and Sedimentation Control Plan	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
206	Erosion and sediment control devices will be installed; construction-phase stormwater management best practices will be implemented[.] Erosion, sediment control and surface water control measures will be deployed in construction lay-down areas and cable routes.	с	ITC LEC Project Team	Future Action	APP, IR	§4.2.2.2 §6.2.1.4, p 6-38 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
207	The ERP to be implemented during operations will be completed during the construction phase and will be provided to the NEB no later than three (3) months prior to the start of commissioning and operations.	с	ITC LEC Project Team	Future Action	IR	IR 6.1	
208	Abandonment Funding ITC Lake Erie shall file with the Board for approval, at least ninety (90) days prior to the date the Project is placed in service, a mechanism to set aside funds for the future abandonment of the Project that is consistent with the principles for set-aside mechanisms set out in the Board's MH-001-2013 Reasons for Decision dated 29 May 2014, and specifically chapters 2.9, 3.4, 5.2.2, and 5.2.4, and appendices VII, XI, and XII. The set-aside mechanism shall reflect the abandonment cost estimate ITC Lake Erie filed in its evidence.	С	ITC LEC Project Team		EC	Condition 38	
209	The interconnection of the Project with these stations [the Erie West 345 kV substation in Pennsylvania and the Nanticoke TS switchyard in Ontario] will be undertaken together with Penelec and Hydro One respectively, subject to their customer impact and approvals processes.	С	ITC LEC Project Team		APP	§4.3.1	
210	Excavation Safety TC Lake Erie shall perform all excavations along the cable route in accordance with applicable occupational health and safety legislation. ITC Lake Erie shall file with the Board, within sixty (60) days of the completion of construction, a report detailing any construction activities that did not comply with the applicable occupational health and safety legislation.	с			EC	Condition 35	
211	Operations Safety Manuals TC Lake Erie shall file with the Board, <b>at least ninety (90) days prior to the commencement of operations:</b> a) safety manuals related to the operation activities of the Project. The manuals must address routine operation procedures, activities, and public safety issues that might be encountered during the operation of the: i) terrestrial and in-water cables; and ii) Haldimand Converter Station; b) an outline of the safety training program to be implemented for the operation of the Project.	С	ITC LEC Project Team	Future Action	EC	Condition 37

Number	Commitment Description	Project Stage[1]	Accountable Lead	Status		Where Co	mmitment Made	Comments
	Anchor Drops and Cable Integrity	C	ITC LEC Project Team	Euture Action	Document [2]	Condition 34	§ or pg. reference	
243	ITC Lake Erie shall fle with the Board, within sixty (60) days after the completion of the in-water cable installation: a) a list of any anchor drop risk areas identified along the Canadian portion of the cable route; b) a list of the appropriate Canadian authorities that have been notified of such risks; and c) a letter of confirmation that ITC Lake Erie has communicated to those authorities the locations of the identified anchor drop risks and of the areas where cable burial is less than the minimum burial depth as identified by ITC Lake Erie.							
244	Undertake visual monitoring for wildlife as part of daily inspections	С	ITC LEC Project Team		SUP		Evidence Attachment 1 (June 24/16)	
245	Pre-Disturbance Bind Surveys in the event of construction or clearing activities within restricted activity periods for migratory birds, ITC Lake Erie shall: a) retain a qualified avian biologist to carry out pre-construction surveys in accordance with Environment and Climate Change Canada's guidance to identify any migratory and other breeding birds and advice nests in and around the Project site; and b) file with the Board, within fourteen (14) days post commencement of construction or clearing: i) the results of the surveys; ii) a description of the mitigation, including monitoring, developed in consultation with government authorities, to protect any identified migratory and other breeding birds and their nests; and iii) a letter of confirmation that ITC Lake Erie has consulted with the appropriate provincial and federal regulatory authorities in relation to matters set out in a), b) i., and b) ii.	c	ITC LEC Project Team	Future Action	EC	Condition 31		
246	Appropriate notifications will be provided to the Minister, Canadian Coast Guard Marine Communications and Traffic Services Centre, mariners, and commercial and recreational traffic prior to and during installation activities.	С	ITC LEC Project Team		SUP		Evidence Attachment 1 (June 24/16)	
247	ITC Lake Erie will notify the appropriate Canadian marine authorities as described in the Draft Environmental Protection Plan (Section 8.2 - Communications Requirements of the draft Navigation and Navigation Safety Plan). The appropriate marine authorities include all applicable Port Authorities; Vessel Traffic Services; Transport Canada; Canadian Hydrographic Service; and the Canadian Coast Guard.		ITC LEC Project Team		IR	IR 5.A.1a		
248	Use of required signals and lighting to identify temporary works associated with installation activities	С	ITC LEC Project Team		SUP		Evidence Attachment 1 (June 24/16)	
249 250	Installation of the underwater HVDC cables in accordance with the installation methods and applicable regulations and guidance materials Burial of the HVDC cables in the lakebed to protect the cables from damage due to shipping traffic, fishing activity and ice scour	C	ITC LEC Project Team ITC LEC Project Team		SUP SUP		Evidence Attachment 1 (June 24/16) Evidence Attachment 1 (June 24/16)	
250	Burna or the HVDC capies in the lakebed to protect the cables from damage due to snipping trantic, tisning activity and ice scour Operations and Maintenance Manual	C	ITC LEC Project Team		EC	Condition 36	_vidence Attachment 1 (June 24/16)	
251	TC Lake Erie shall file with the Board, at least sixty (60) days prior to the commencement of operations, an Operations and Maintenance Manual for the ITC Lake Erie electrical system. The Manual shall require ITC Lake Erie to conduct documented audits of is necords and inspections of the ITC Lake Erie electrical system and right of way to confirm ITC Lake Erie s conformly to the requirements of the Manual. The Manual shall also include a schedule or procedure for its yearly review and update, as appropriate, to remain current with regulatory requirements and accepted industry practice. The Manual and the programs and procedures on ITC Lake Erie's records as required by the Manual, shall be made available to the Board for periodic review. The Manual shall all notide, but not be limited to: a) type of maintenance followed by ITC Lake Erie's elected maintenance practice; b) maintenance schedules according to the selected maintenance practice; c) operational procedures for steady state and transient conditions; d) maintenance and monitoring requirements and plans for the power line (terrestrial and in-water cable) and the Haldimand Converter Station; e) a public awareness of ongoing hazards associated with the Project; and l) proceeds public awareness of ongoing hazards associated with the Project; and l) provides contact numbers for the public to report issues and concerns; f) vegetation control plans and procedures for the power line (stright-of-way and the Haldimand Converter Station footprint; g) training requirements for perioneling the Manual; and the Haldimand Converter Station footprint; g) the maintenance and operations and procedures for the power line (stright-of-way and the Haldimand Converter Station footprint; g) training requirements for perioneling the Manual; and h) the maintenance and operations records that will be produced during operations, including during the performance of maintenance tasks and routine inspections.							
252	In order to address the potential increase in soil temperature from the underground AC and HVDC cables during operation, the trenches used for the majority of the installation would be back-filled with low thermal resistivity bedding material as necessary.		ITC LEC Project Team		APP, IR			
253	Once construction is complete, disturbed areas will be re-graded to pre-existing contours and repaved or re-seeded with an appropriate seed mix to reduce erosion and sedimentation potential. ITC Lake Erie will consult with Haldimand County and the Long Point Region Conservation Authority (LPRCA) to confirm the preferred seeding for the Haldimand Road 55 ROW.		ITC LEC Project Team		APP	§4.2.3.2 §6.2.1.3, p 6-32		
254	Once construction is complete, the area of the Haldimand Road 55 ROW will be returned to previous condition and roadside ditching will be restored. The underground cable route will be seeded as appropriate for etruin to its previous condition to the extent practical ITC Lake Erie will submit the design to Haldimand County as part of the process to establish the permanent easement and will discuss revegetation of the Haldimand Road 55 ROW with Haldimand County to align with current municipal practice in the area. ITC Lake Erie will also address requirements for drainage on OPG lands in discussion with OPG and Hydro One, as the design of the AC cable and Terminal Station on the OPG land proceeds.		ITC LEC Project Team	Future Action	APP	§6.2.1.4, p 6-36		
255	The HVDC and AC cable trenches located in the Haldimand Road 55 right-of-way will be restored in accordance with municipal and provincial requirements.	С	ITC LEC Project Team		IR	IR 4.5 a, b.1, b.2	t, b.3	
256	Restore construction area to original conditions to the extent practical and install above grade markers where the AC and HVDC transmission cables are buried outside of the public ROW[.]	с	ITC LEC Project Team		APP	§4.2.2.2 §4.2.3.2 §4.2.3.3		
257 258	Solis associated with construction near Haldimand Road 55 will be replaced back in this area once the construction is complete. Given the limited potential for any soil contamination and given that no requirements for offsite storage have been identified at this time, a plan for testing soils is not required. Restores oil profile using stockholied exexated soils to the extern tractical	c	ITC LEC Project Team		IR SUP	IR 3.26c	Evidence Attachment 1 (June 24/16)	
258	Backfill and compact cable trenches to match the surrounding area and install above-grade markers where the AC and HVDC transmission cables are buried outside of the public	c	ITC LEC Project Team ITC LEC Project Team		SUP		Evidence Attachment 1 (June 24/16) Evidence Attachment 1 (June 24/16)	
260	ROW Re-grade disturbed areas to pre-existing contours and repave, install gravel or re-seed with an appropriate seed mix as appropriate to reduce erosion and sedimentation potential	С	ITC LEC Project Team	Future Action	SUP	Supplementary E	Evidence Attachment 1 (June 24/16)	
261	Monitor the Haldimand Converter Station site and the Haldimand Road 55 ROW as needed to ensure that issues are identified and addressed appropriately	C	ITC LEC Project Team	Future Action	SUP	Supplementary P	Evidence Attachment 1 (June 24/16)	
262	Refurn dept contacts to pre-existing conditions	c	ITC LEC Project Team		SUP		Evidence Attachment 1 (June 24/16)	
263	For trenching on the Haldimand Converter Station site and in the ROW of Haldimand Road 55, a shored trench will be excavated. Spoils from the Haldimand Converter Station site	С	ITC LEC Project Team		APP, SUP	§4.2.3.3		
264	will be managed in-situ and spoils along the Haldimand Road 55 ROW will be managed at the Haldimand Converter Station site. Excavated solve illo temporarily stockpiled within the worksite or transported to the Haldimand Converter Station property. Topsol will be stored separately from excavated subsoil to facilitate reuse. Materials that may be hauled off-site for disposal will be tested to ensure compliance with Ontario disposal regulations. Soil stockpiles will be protected by appropriate erosion and sedimentation control where the potential exists for sediment transport off-site. Number	Commitment Description	Project Stage[1]	Accountable Lead	Status		Where Commitment Made	Comments
					Document [2]		
265	Excavated soils [from HDD] will be temporarily stored on site during construction and will be used to restore the site to its previous grade once the drilling process has been completed; or transported for disposal/reuse at an approved location.	с	ITC LEC Project Team		APP	§4.2.3.7	
266	Appropriate spill prevention and containment measures for hydraulic fluids or fuels will be applied during construction. Construction crews will have spill response procedures and spill response absorbent pads in their construction vehicles.	С	ITC LEC Project Team		APP	§4.2.3.2	
267	During excavation, appropriate measures such as grading and / or sandbags (if required) would be applied to minimize potential surface water runoff into the trench. Post construction, surface water would be directed to roadside ditches.	с	ITC LEC Project Team		IR	IR 4.5 a, b.1, b.2, b.3	
268	Water removed from excavated trenches will be discharged to an upland vegetated area off the roadway. It will be discharged through a "pumped water filter bag" surrounded by a compost filter sock ring that will overflow into existing roadway ditches or upland area. There will be no direct discharges to roadside ditches.	с	ITC LEC Project Team		APP	§4.2.3.2	
269	Implement Stormwater Management Plan as described in the EPP and the associated Civil Grading Plan	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
270	Site grading will (be implemented to) convey stormwater flows without adverse impact to other properties.	C	ITC LEC Project Team		APP	§4.2.2.1	
271	Continue surface water management in accordance with the Stormwater Management Plan CSR's January 2016 Marine Geophysical Survey Results Report (Response to IR No. 3 Attachment 3) recommended that additional surveys be undertaken including a Remotely	C	ITC LEC Project Team ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16) IR 4 14b	
272	Operated Vehicle Survey, Grapnel Survey and a Clearance Survey. These further surveys will be included in the Project construction plan and undertaken as an initial construction activity or during the construction process, as appropriate. ITC Lake Erie will carry out the additional surveys recommended by CSR referred to in 4.14 b), as appropriate.					IR 4.14c	
273	During cable installation in the Haldimand Road 55 ROW, a single lane will remain open for local traffic and on-site traffic control will be provided with the exception of the HDD crossing of the shoreline.	с	ITC LEC Project Team		APP, IR	§4.2.3.2 §6.2.1.11, p. 6-57 §6.2.1.14, p. 6-68 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
274	Implement Temporary Traffic Control Plan measures along Haldimand Road 55 including: - construction of a temporary paved lane on the existing granular shoulder on the west side of the roadway - placement of temporary pavement markings as appropriate - installation of temporary concrete barriers along the length of the work area along Haldimand Road 55 to shift traffic to the west side of the centerline of the road and provide work zone protection	С	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
275	Redirect traffic accessing Hickory Beach Lane from Haldimand Road 55 for approximately three months to an alternate access via Erie Street	С	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
276	Redirect traffic accessing the western entrance to the former Nanticoke Generating Station for approximately two weeks to an alternate access via South Coast Drive	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
277	Staff qualified in first aid and having valid hazardous materials training will inspect safety measures, including polluting and hazardous materials, during construction for applicable construction areas and will be responsible for dealing with immediate situations as well as reporting to and coordinating with local emergency response personnel. This person(s) will be trained in the protocols of the Lake Eric Connector Emergency Repair and Response Plan to ensure a property coordinated response.	с	ITC LEC Project Team		APP	§6.3.1.1	
278	Monitor weather conditions on a daily basis during construction	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
279	Suspend construction activities if warranted by the weather conditions (e.g., electrical storms)	C	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
280	Maximize outdoor construction work during non-winter months in order to avoid potential issues with heavy snow or ice accumulation Conduct the HVDC cable installation in Lake Erie in the spring or summer	C	ITC LEC Project Team ITC LEC Project Team		SUP SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
281	Conduct are involved and installation in Lake Line in the spinit of summer Maintain setback of approximately 15 m to the woodland/wetland block adjacent to the Haldimand Converter Station site to minimize impacts to species and/or habitat	C	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
283	Comply with the Migratory Birds Convention Act, by - liming the work to avoid potentially harmful activity during the bird nesting period - removing potential ensuing habitat or marking the site unsuitable/unattractive for nesting prior to the bird nesting period; and/or - monitoring for active nests and applying protective setbacks from nests until such nests are no longer in active use during that season	c	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
284	Brief the construction contractor's site supervisor, staff, workers and subcontractors on measures to report observations of potential nesting activity to the Environmental Compliance Manager and a qualified on-call biologist who will attend the site and confirm the presence and locations of nests	с	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
285	Should an active nest be identified, work near the nest will be temporarily discontinued and a protective setback will be applied that is appropriate to the species and specific to the setting of the nest and the observed behaviour of the nesting birds. The nest will be periodically monitored from a distance and the setback will be maintained until nesting activity has ceased for the season.		ITC LEC Project Team		IR, SUP	IR 3.A.1.7e Response to IR 3A Attachment 4 (Mar 11/16) Supplementary Evidence Attachment 1 (June 24/16)	
286	Report any incidents with wildlife (e.g., aggressive or nuisance behaviour) to the Environmental Compliance Manager, who will immediately notify the appropriate local and provincial agencies	С	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
287	Report any trapped, injured or deceased wildlife within the construction areas to the Environmental Compliance Manager, who will contact the applicable provincial authorities to consult on appropriate action	с	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
288	Report any wildlife collisions to the Environmental Compliance Manager, who will notify the applicable provincial authorities and local law enforcement (if necessary) Over the applicable provincial sufficient and the second second second second second second second second second	C	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
289	Once the appropriate authorities have been notified as listed above, the Environmental Compliance Manager will notify ITC Lake Erie environmental personnel Document all wildlife encounters in detail, including the date, location, wildlife species encountered, type of encounter, and any actions taken by personnel to address the situation	C	ITC LEC Project Team ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
290	Document all whole encounters in oetail, including the date, location, whole species encountered, type of encounter, and any actions taken by personnel to address the situation If any non-migratory bird or other terrestrial Species at Risk (SAR) individuals are encountered, the local Ministry of Natural Resources and Forestry (MNRF) District Office will be		ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16) Supplementary Evidence Attachment 1 (June 24/16)	
291	contacted; and for any migratory bird SAR listed under schedule 1 of the Species at Risk Act (SARA), Environment and Climate Change Canada (ECCC) will be contacted by email at ec faune ontario-wildlife.ontario.ec@canada.ca or by phone at 905-336-4464.	C	-		-		
292	Suspend work in the vicinity of the observed SAR until: - the Environmental Compliance Manager has been notified - the Environmental Compliance Manager has assessed the discovery with the qualified on-call biologist - if the SAR observation is confirmed, the applicable regulatory agencies have been notified, including the local MNRF district office, and ECCC as appropriate - IT C Lake Eric environmental personnel have been notified of a confirmed SAR observation - appropriate mitigation has been undertaken	C	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
293	The construction contractor's site supervisor, staff, workers and subcontractors will be briefed on measures to report observations of potential nesting activity to an on-call biologist who will attend the site and confirm the presence and locations of nests.	С	ITC LEC Project Team		IR	IR 3.A.1.7d Response to IR 3A Attachment 4 (Mar 11/16)	
294	A small woodland area is located in the southeast corner of the property, but will not be directly disturbed by the Project as a separation distance of over approximately 15 m will be maintained between the footprint of the facility and this woodland during construction.	С	ITC LEC Project Team		APP, SUP	§4.1.3 Supplementary Evidence Attachment 4 (Feb 26/16)	
295	Visual monitoring would be undertaken as part of daily inspections and any wildlife inadvertently accessing the trenches would be removed in accordance with protocols established as part of the EPP. Updated:	31-Oct-22						1
Number	Commitment Description	Project Stage[1]	Accountable Lead	Status		Where Commitment Made	Comments
	The ERPs for construction and operations are expected to include the primary components listed below. Additional detail has been provided regarding the anticipated contents of	C; 0	ITC LEC Project Team	Euture Action	Document [2]	§ or pg. reference Supplementary Response to IR 6.1c (Jul 6/16)	
296	each ERP section (in response to IR 6.1c). - Introduction - ERP Development, Training and Maintenance - Safety Policy - Environmental Policy - Environmental Policy - Environmental Policy - Emergency Preparedness and Response Policy - Distribution Liet - Emergency Levels and Definitions - Emergency Contacts - Response Action Plans - Response Action Plans - Post Emergency Actions - Forms						
297	The notification procedures in the event of an emergency will be detailed in the draft ERPs. The notification procedures will be developed based on guidance as included in CSA Standard Z31-103 Emergency Preparedness and Response and NERC Standard EOP-001-2b – Emergency Operations Planning. The notification procedure will describe: • who is responsible for notification and reporting; • to whom notifications and reports are to be made • internally (e.g., management); and • externally (e.g., police, fire, regulatory agencies, and other public authorities); • who notifications and reports are to be made (e.g., immediately, within 24 h); and • how notifications and reports are to be made (e.g., by telephone, by e-mail). Notification procedures will consider the classification level of the emergency and/or hazard identified. The list of entities and the notification procedure will be confirmed with interested agencies during the consultation process.	C; O	ITC LEC Project Team		SUP	Supplementary Response to IR 6.1e (Jul 6/16)	
298	Based on the consultation as outlined in the response to IR 6.1a, ITC Lake Erie will develop and confirm the list of entities that will require ITC Lake Erie to file the ERPs with the entity, and the frequency of updates for the ERPs. The confirmed list of entities will be included in the ERPs to be provided to the NEB when completed.	C; O	ITC LEC Project Team		SUP	Supplementary Response to IR 6.1f (Jul 6/16)	
299	The Safety Coordinator will monitor on-site hazards and conditions and perform hazard inspections at least once a month he one sure compliance with the Occupational Health and Safety Act (OHSA); however, if it is not practicable to conduct the inspections once a month, the Safety Coordinator will conduct inspections at least and the safety Coordinator will conduct inspections at least and the safety Coordinator will conduct the inspections at least apart of the workplace every month. The Safety Coordinator will review health and safety records, as applicable, at least every two years.	C; O	ITC LEC Project Team		SUP	Supplementary Response to IR 6.1b (Jul 6/16)	
300	The Safety Coordinator will be consulted when changes are made to equipment, materials, or processes that may affect the safety of operations. This proactive safety approach will ensure that the Safety Coordinator evaluates all equipment and processes for compliance with applicable safety rules and regulations.	C; O	ITC LEC Project Team		SUP	Supplementary Response to IR 6.1b (Jul 6/16)	
301	Implement landscaping and planting plan as detailed in the Landscaping and Planting Plan and associated design drawing	C; O	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
302	ITC Lake Erie confirms that the Navigation and Navigation Safety Plan will be adhered to during cable repair activities. ITC will develop and maintain a robust maintenance plan for the Project, and will include in the maintenance plan the identification of specific equipment requiring specialized	C; O C; O	ITC LEC Project Team ITC LEC Project Team		IR	IR 7.14a IR 1.2j, k, m, n (Aug 4/15)	
303	If C win develop and maintain a robust maintenance plan for an errolect, and win hold on the maintenance plan the demination of specific equipment requiring specialized maintenance and a description of the applicable maintenance practices. A typical lesting and hispection plan will be prepared once the technical specifications are completed and final equipment selections are made. A separate maintenance strategy will not be developed; rather, the maintenance plan will address all maintenance-related matters. The maintenance plan will be completed once detailed design is finished; it is expected that the maintenance plan will be submitted to the Board by early 2019 based on the current Project schedule. Electrical maintenance will be part of the quality management system.	0	The Lee Project reality	Puture Action	IK	Response to IR 1 Attachment 1 (Dec 18/15)	
304	Implement spills contingency protocols and procedures as described in the Spill Prevention and Contingency Plan	C; O	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
305	ITC Lake Erie will implement the Stormwater Management Plan and construct vegetated swales to provide quantity and quality control for the surface runoff from the Haldimand Converter Station site.	C; O	ITC LEC Project Team	Future Action	APP, IR	§6.2.1.4, p 6-38 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
306	Implement waste management procedures during construction and operation as described in the Waste Management Plan (EPP)	C; O	ITC LEC Project Team	Future Action	SUP	Supplementary Evidence Attachment 1 (June 24/16)	
307	The following general guidelines will be applied: - where a choice of equivalent products exists to perform the same function, the least hazardous product will be chosen - all reasonable preventiative measures to avoid the release of waste or hazardous materials to the environment will be undertaken - waste and hazardous material spills will be reported to the Environmential Compliance Manager and, in accordance with regulations, to the appropriate regulatory authorities - spills will be cleaned-up immediately and throughly as specified by the Spill Prevention and Contingency Plan - whenever possible, wastes will be recycled - hazardous products and waste materials will, to the extent possible, be disposed of or moved to a secure staging area on a daily basis	C; O	ITC LEC Project Team		SUP	Supplementary Evidence Attachment 1 (June 24/16)	
308	All excavation and shoring work will conform to OHSA.	C; DEC	ITC LEC Project Team	Future Action	APP, IR	§6.2.1.2, p 6-29 §6.2.1.2, p 6-30 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
309	[Dust and vehicle] Emissions during construction will be controlled by: - Compliance with local municipal by-kaws regarding working/construction hours - implementing protocols minimizing engine idling and maintain vehicles - Dust control during construction through various operational methods such as watering, staging of work, and re-vegetation of disturbed areas		ITC LEC Project Team		APP, IR	\$6.2.1.8, p.6-45 \$0.2.1.8, p.6-46 \$0.2.1.8, p.6-47 \$6.2.1.11, p.6-57 \$6.2.1.14, p.6-58 \$6.2.1.15, p.6-71 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
310	[Noise] Emissions during construction will be controlled by: - Compliance with local municipal by-laws regarding working/construction hours - Implementation of a protocol minimizing engine iding and use of air brakes - Use of shielding to mitigate noise from HDD installation to the degree practical	C; DEC	ITC LEC Project Team	Future Action	APP, IR	§6.2.1.9, p 6-50 App D, Table D-1 Response to IR 1&2 Attachment 3 (Sept 18/15)	
311	The Project will operate within the terms and conditions of interconnection agreements between ITC Lake Erie, Penelec and PJM, and ITC Lake Erie and Hydro One. The Project will be operated in compliance with applicable IESO and PJM operating requirements and criteria as articulated in the IESO Market Rules and the PJM Open Access Transmission Tariff. These requirements include the duties of maintaining acceptable voltages, keeping equipment operating within established ratings, and maintaining system stability, both during normal operation and under recognized contingency conditions on the transmission system.	0	ITC LEC Project Team	Future Action	APP	§4.2.5.5 §4.3.5
